

# Abetter Impression Evidence

## Your expert tool for your daily tasks

- ✓ Increases the efficiency of your working processes
- ✓ More efficient use by extensive research
- ✓ Individual indexing for fast identification

Learn more about  
Abetter Impression Evidence:

**Abetter Impression Evidence is an evaluation and management software to analyze shoe prints, skid marks and glove prints for an efficient use of time and staff. It includes the creation of an imprint database and the characterization of pattern in order to enable complex search queries and forming of pattern correlations.**

### III Seek and Find

With the help of your pattern database, you start your search for hits between traces and reference patterns. Using complex queries, relevant pattern are located and the comparison of pattern can take place. Thereby, patterns are characterized by categories and characteristics analogical to the "Johannist-haler Katalog".

### III Illustrative

With a high-performance picture browser, patterns can be visualized and particular shoe prints, skid marks as well as glove prints can be compared with reference patterns. On this base, you can easily identify pattern correlations.

### III Established and Approved

Data security, consistent documentation and a complete audit trail of all activities take the strict demands on working with evidence into account. Abetter Impression Evidence has been developed in cooperation with the State Office of Criminal Investigation in Lower Saxony and is successfully in use there ever since.

# All-in-One

## ||| Simplify Your Entire Workflow

### 1 Create a Pattern Database

The key element of Abetter Impression Evidence is a pattern database wherein all reference patterns can be stored and managed. Thereby a dataset consists of general information about shoes, tires or gloves as well as their detailed description via predefined attributes. Pictures can be added optionally.

### 2 Characterize Patterns

Based on the principle of indexing, trace patterns can be classified via a description of characteristics. All features for pattern classification are freely configurable and can be arranged hierarchically.

### 3 Seek and Find

A variety of filter options enable complex queries. You can link search options using logical operators (AND, OR, XOR, NOT) and nesting your search terms to any depth. Furthermore, you can apply filters for sorting your search hits.

### 4 View and Compare

After narrowing down the relevant patterns, screening of patterns is the key for a successful pattern analysis. With a high-performance picture browser patterns can be visualized and compared.

### 5 Create Pattern Correlations

If a reference pattern is in concordance with a crime scene pattern, both can be linked as a pattern correlation for a final identification of crime scene pattern.

## ||| More Security

Dealing with evidence demands to operate in a careful manner. Therefore, a chronologic documentation of custody, transfer, analysis and disposition of evidence available as an audit trail is most crucial. To guarantee full data security an integrated right concept enables to create user groups with different access rights such as reading, editing and deletion.

## ||| A Fitting Module for Every Field

For best communication with other departments, Abetter Impression Evidence can be combined with the cross-departmental case management system Abetter Case Management. Additionally also other specific evaluation modules such as for lab management, evaluation of fingerprints as well as management of DNA database hits can be linked with the case management system.

## Your Benefit

- **Multi User Version** via client-server system with a shared database, designed for as many users as you demand
- **User-friendly Interface** that makes easy to learn, efficient to work and satisfying to use the software
- **Extensive Services** by Qualitytype GmbH such as support, training and customizations
