April 20, 2017 – (New York, NY) Virsig, LLC has been recognized as the number 22<sup>nd</sup> fastest-growing security system integrator in North America by *Security Dealer and Integrator (SD&I)* magazine. Virsig, a federal and state certified *Service-Disabled Veteran-Owned Business (SDVOB)*, is a network-centric technology company that has a distinct focus on electronic security systems.

The ranking was announced in the April 2017 edition of *SD&I's* magazine, which published their *Fast50*, an annual market research and rankings program acknowledging the fastest-growing security dealers and integrators in the country. Those selected as part of the *Fast50* list run the gamut from new to well-established firms. These firms are recognized and ranked based on their year-to-year percentage and revenue growth over a three-year period; this provides the ability to recognize all kinds of companies, large and small; thus, every firm has an equal chance to earn a ranking in the program.

Brian Valenza, CEO of Virsig said, "It's always humbling, and an honor, to be recognized by your peers, it makes all the hard work we do, to provide our clients outstanding service, even better."

*Security Dealer & Integrator* magazine is the voice of the channel for security and fire system resellers, service providers, product distributors and monitoring firms. The magazine covers industry business trends and technology solutions that impact the businesses of electronic security dealers and integrators working in commercial, industrial, government and residential markets.

Based in New York City, Virsig has its finger on the pulse of secure IP computer networks, monitoring, management, and maintains a strong focus on security technology. Its products and services help secure infrastructure and individuals; this includes surveillance and video management systems, access control, active shooter detection systems, and intelligent data systems for critical infrastructure.
