Consulting Firms, an EU GDPR Application for Hadoop Data Lakes, Read this Article to benefit from a timely opportunity

Yes, you know all the nuances of GDPR and the pending May 25, 2018 target dates for final implementation. You can even impress upon your clients the real dangers GDPR poses to their long term welfare. **But can you do much to actually assist them in reaching compliancy([Link](#))?**

How can you **be a 'hero',** to your existing clients and also have the people power to expand your business? Please read this short article to discover how our software product will give you a distinct advantage over other consulting firms competing for GDPR projects. Use our products to perform compliancy audits/assessments, provide real mechanisms for discovery and encryption of Personally Identifiable Information (PII) for files either at rest in Hadoop, or streaming into Hadoop from Social Media, IoT and many other forms of data feeds.

With the large and ever growing shortage of skilled Data Scientists & Management it just makes sense to use software products that provide a more accurate impact than many skilled Data Scientists/Managers and which can be implemented with less technical consultants.

"Gartner Says Organizations Are Unprepared for the 2018 European Data ProtectionRegulation" "The European General Data Protection Regulation (GDPR) will have a global impact when it goes into effect on May 25, 2018, according to Gartner, Inc. Gartner predicts that by the end of 2018, more than 50 percent of companies affected by the GDPR will not be in full compliance with its requirements." Link

You can benefit from the developing confusion and fear surrounding GDPR compliancy!

Now how to get this done by May of 2018 with a mass shortage of data experts, lack of scalable, capable software applications and with the deadline just around the bend:

- ✓ **BigDataRevealed has the answer and more importantly the solution to get you on your way in days, audit your current Data Lake & assist in the GDPR Remediation phase with BDR-Secure-Sequester-Encrypt Application** [Webinar Video](#)

- ✓ **Consultants, download our BDR-Application and start your Audit/Assessment today with our Free remote implementation services, training.**

- ✓ **Once you are convinced BigDataRevealed will deliver for your clients:**
  - o **Subscribe to BDR by Project, by Month or Annually**
  - o **Share as much as 50% of Subscription fees if your Client purchases BDR**

Hadoop delivers the ability to process most any type of data, IoT, structured/semi-structured data and much more. Big data can also be big trouble for companies that have been negligent when bringing new data into their Data Lake. If data is not scrutinized for PII data, analyzed and encrypted as it enters the Data Lake, or immediately after, the client is vulnerable.

New data will always be streaming into the Data Lake from multiple sources and it may be too late and difficult to identify and remediate problems associated with PII after it already resides in the data lake. Don't let Hackers find that PII data before you do. Protect your client and ensure PII is discovered, put into the BDR-Intelligent Catalog and Metadata, captured and encrypted! That is why you need a product such as BigDataRevealed. [Webinar Video](#)
