

Decryption

BigDataRevealed is opening its GDPR, Data Regulatory, Discovery, Remediation, Encryption-Sequester software for others to become resellers, Integrators, or for consideration of White Label agreements.

Don't Fear the Hack, Fear What Data is Stolen. If They Only Take Personal Data that is Heavily Encrypted, You Have Protected Your Customers.

You've heard it before, "it's not if you're Clients will be hacked, it's when! Be Prepared – Encrypt or Sequester you Customers' Private Data".

Auditing Firms, Consulting Organizations, Big Data Vendors, **it's your time to shine**, have a positive influence on our world while increasing profits! Limit the negative impact of cyber-attacks by Discovering and Encrypting vital data before the hack occurs. Understand our technology and lead your clients through the developing crisis in data security.

Every major firm realizes they can't protect their data stores from intrusion. No matter how hard they try the hackers will adapt and find their way in. There is only one solution available, and all major governments are awakening to that fact and will soon demand that every company implement some version of that one solution. Companies will no longer be allowed to maintain Personal Information in any of their data stores that can be used illegally or maliciously. The first stringent regulations will soon be enforced by the European Union. These regulations require compliance from any company doing business with European Union citizens and are known as the European Union's General Data Protection Regulations (GDPR). After the latest US intrusion (Equifax) that industry experts equate to the impact of a Category 5 Hurricane, you can be certain exacting regulations will become ubiquitous.

There are 3 million or so companies that must meet the EU GDPR Regulations of which 40,000 are considered major firms that will soon be asking for help! Be there with a technological solution that is easy to implement, directed squarely at the problem of discovering, encrypting and sequestering Personal Information, **is completely scalable, delivers Indirect Identifiers as well as the Right of Erasure "Right to be Forgotten"** and comes with fully developed task management modules to ease the burden of processing the volume of files and columns that every company will need to address. .

BigDataRevealed can provide you with a solution that no other firm currently possesses, though many make the claims they do. With our help your firm can become a leader overnight in the fight to protect the data assets of all firms.

It is time to let companies make their own rules and stop playing by the hacker's rules.

BigDataRevealed is opening its software for others to become resellers, Integrators, or even to consider White Label agreements.
