

Planetworking .NET offers a wide range of services and support for Small Businesses and Home Offices. Their technology needs are specific to their size and require detailed attention; from deploying new network wiring, implementing better firewall security, managing servers, workstations, laptops, and printers, providing backup solutions, and assisting promptly when needed.

The budget required to manage such systems often become bloated beyond the customer's control or awareness. We offer solutions and management that will keep the cost low, and maintain reliability in the systems and support for it. Professional and prompt service is what you will get allowing the client to maintain a level of comfort knowing their systems are secure, speedy, and stable. Managing this level of quality is no easy task, but with years of experience and background supporting small businesses, we will provide solutions and the services to reach and surpass the customer's expectations.

We offer monthly contracts based on blocks of hours that will cover weekly visits, 24/7 remote support, and phone assistance. In addition, we implement external backup solutions to keep your data safe and off-site, making it readily accessible in the event of disaster recovery needs. These contracts are fine-tuned to the client's requirements and technology infrastructure, everyone is an individual and deserves specialized attention and cost effectiveness to their own needs, there is no set one price for all or one system fits all scenarios here.

We will bring your network to the next level and increase your productivity exponentially. For more information, please visit our website @ www.planetworking.net...

...Helping clear the path to Excellence!
