UAV OPERATIONS

The deployment of Unmanned Aerial Vehicles (UAVs) in a dedicated surveillance role provides our coalesced security teams with significant, unsurpassed, strategic advantages.

Our UAV security teams derive predominantly from former military and police backgrounds and have received their Remote Pilot Qualifications (RPQ) from a leading National Qualified Entity (NQE).

All UAV operations are regulated by the Civilian Aviation Authority and we operate within the entitlements of our Permission for Commercial Operations (PfCO). We conduct both day and night operations, supported by specialist vehicles and equipment in overt and semi covert states.

Our aircraft payloads include FLIR thermal imaging sensors, leading industry standards, and optical zoom daytime cameras providing detection ranges far superior than man our animal. The adaptability and enrichment of our technology allow us to momentarily refine the effectiveness of security operations.

Typical Deployments

- Asset protection
- Fire, and leakage discovery
- Intruder detection
- Increased physical deterrent
- Counter surveillance support
- Counter UAV
- Close protection & residential security team support
- Ensuring HSE compliance
- Protecting areas of mass crowd congregation
- National infrastructure support
