

Printer based forms

Forms Card™ is an affordable, compatible and easy to implement forms solution designed for fast, high performance printing. Forms Card will help businesses eliminate pre-printed form costs while providing forms that can carry a powerful marketing image directly to their customers.

Eliminate costly, preprinted forms

Forms Card is an easy-to-use, electronic forms package that makes it possible to print forms on demand. Forms Card maximizes printer investment with the use of electronic forms. Preprinted forms are expensive to produce, store and handle, plus they can quickly become obsolete, forcing businesses to destroy and reprint them. Forms Card eliminates the need to buy preprinted forms and cuts storage and handling costs. Forms are created and printed as they are needed. Additionally, forms can be updated with information such as new phone numbers, made available instantly to users.

Easily integrate electronic forms into your business

Forms Card is one of the simplest way of integrating electronic forms into your workplace. It works with any host or network system. Since it generally requires no changes to host applications and as no server or host-based merge program is necessary, you will find the integration extremely smooth. What's more, because forms are stored at the printer (and merged there), network traffic is reduced and through put is improved.

Cost savings

- No more preprinted forms
- Reduced storage costs
- Maximize printer investment
- No dedicated server required

Simple powerful design

- Merge program in printer
- Reduced network traffic
- Forms archive and retrieval
- Central forms management

Superior compatibility

- No application changes
- SAP R/3 RDI support.
- Embedded bar code support
- Host independent
