

Eliminate costly preprinted forms

Forms Composer is an easy-to-use, electronic forms package that makes it possible to print forms on demand. Forms Composer maximizes your printer investment by allowing you to enhance your printer with the use of electronic forms. Preprinted forms are expensive to produce, store and handle, plus they can quickly become obsolete, forcing you to destroy and reprint them. Forms Composer eliminates the need to buy preprinted forms and cuts your storage and handling costs, by letting you create your own forms and print them as they are needed. Forms can be updated with new phone numbers, addresses, etc and made available instantly to your users.

Using the included Form Designer or your choice of third-party development tools, you can easily customize individual e-forms to match your specific data collection needs. Collected e-form data, stored in XML format, can even populate external ODBC data sources.

Easily integrate electronic forms into your business

Forms Composer is one of the simplest ways of integrating electronic forms into your workplace. It works with any host or network system, generally requiring no changes to host applications and as no server or host based merge program is necessary it is quick to implement. What's more, because forms are stored at the printer (and merged there), network traffic is reduced and through put is improved. Productivity and installation costs down. Collect data manually or automatically from other business applications and databases.

Productivity enhancing integration

Forms Composer has an easy to use Design program to create forms (old or new). A DataMap program handles the variable data layout that will come from the host system. A style program lets you select paper size, input tray, etc. before downloading the form to the printer's flash or hard disk option. Once a form is designed and in the printer, data can be sent directly from your host computer (mainframe, mid-range, PC, etc.) and Forms Composer will automatically merge the data with the correct form design and prints the completed form. High quality forms - quickly and efficiently.

Cost savings

- No more preprinted forms
- Reduced storage costs
- Maximize printer investment
- No dedicated server required

Simple powerful design

- Merge program in printer
- Reduced network traffic
- Forms archive and retrieval
- Central forms management

Superior compatibility

- No application changes
- SAP R/3 RDI support.
- Embedded bar code support
- Host independent
