

ChlorKing 5000 Handheld Operation

ChlorKing 5000 Handheld Conductivity Tester

Operations Guide

ChlorKing 5000 Handheld Operation

The ChlorKing 5000 Handheld Conductivity Tester measures the salt concentration of saline pools. The tester displays conductivity as salt in parts per million (ppm).

Features:

- **Toroidal probe for salt concentration measurement**
- **Temperature sensor for temperature measurement**
- **Control/display assembly**

ChlorKing 5000 Handheld Operation

Operation:

1. Press the I/O button once to turn on the display.
2. The 0 – 10,000 ppm light will be lit indicating that the unit is ready to measure salt concentration.
3. Place the probe in the water.
4. Pressing the “m” button once will display temperature. Pressing the “m” button a second time will toggle back to the 0 – 10,000 ppm screen.
5. Press the I/O button to turn the unit off.
