For Immediate Release

PUSHING VISUALISER PERFORMANCE TO AN UNPRECEDENTED LEVEL

HoverCam Solo 8 - The World's first SuperSpeed USB 3 Document Camera

Many visualisers make the claim they can achieve a 30fps frame rate over USB, but it usually only happens at a low resolution like VGA. Such a frame rate would normally require expensive optical components, that demand significant desk space and are absolutely not portable!

The HoverCam Solo 8 is the world's first SuperSpeed USB 3 document camera that utilises an advanced 8-megapixel sensor and Photon 1 technology to deliver uncompressed YUV video with a 320x zoom, at true 30 frames per second (fps) - full-motion video frame rate.

The Solo 8's stylish slim line build allows users to take the device anywhere and the pre-loaded software bundle - FlexView and FlexCap - allow users to record video, take snapshots, scan documents directly to PDF, annotate and record annotations over video and use the camera as a webcam, on both Mac and PC.

"I think the camera is a great product at a great price-point. It feels good and robust, and I like that it has quite a lot of metal in it. The fact that it is plug and play is a bonus, and that it works in USB 2 or USB 3 ports as well", *David Pammenter, Audio Visual and Multimedia Officer, University of Edinburgh*

The Solo 8 has an RRP of £350(ex vat), and it is currently available from Wishtrac as well as numerous re-sellers throughout the country, with free demonstrations available from a retailer in your local area.
