

Simply Pure Water Treatment Systems

Well Water Treatment Solutions

Iron and Sulphur are two of the most common elements found in nature, while both are extremely important for everyday life, both are a nuisance in water and can cost you money and frustration.

Iron staining is a common problem in homes today. It causes orange staining on fixtures, as well as dingy clothes and sometimes can have negative effects on both hair and skin. Sulfur is easily detected by the presence of a "rotten egg" odor, and is sometimes associated with yellow staining.

All of these problems can be eliminated with the **SPWTS™** Air Injection Oxidizing Filtration System.

Protect your Appliances

By reducing the iron and Sulphur buildup in your water your appliances will last longer. Rust and slime buildup make your appliances work harder and less efficiently, requiring more maintenance or replacement.

Using Nature's Own Process

These naturally occurring elements can be removed using nature's own process of oxidation. The SPWTS AIO™ maintains an "air pocket" in the top of the tank while the system is in service. As water passes thru the air pocket, iron and Sulphur are oxidized. The SPWTS AIO™ filter media bed then removes the oxidized iron and Sulphur from the water. Additionally, dissolved oxygen is added to the water.

Efficient and Chemical Free

The SPWTS AIO™ Air Injection Filter System, as a single tank system, is an efficient and cost effective system. The need for additional equipment...air tanks, feed pumps, or harsh chemicals (like those used in Manganese Greensand Systems) is virtually eliminated! *

Proven Technology

The SPWTS AIO/SO™ system includes the Clack WS1 CV or the WS1 Matrix Metered control valve that automatically backwashes the system to clean the media and flush everything down the drain. By utilizing a patented piston in the control valve, The SPWTS AIO™ is able to put the whole oxidation process inside

one tank, keeping maintenance costs and down time to a minimum.

Clack's WS1 CV Control Valve

Made by Clack, a leading manufacturer of control valves in the US, the digital control valve allows for ease of setup and automatic operation.

The SPWTS AIO™ can remove up to 8 ppm Hydrogen Sulfide and up to 7 ppm Iron. A daily backwash will remove accumulated iron and replenish the filter media bed. The regeneration process also adds a fresh air pocket to the system.

Your SPWTS Rep:

* Will not remove calcium or hardness from water, there may be a need for a water softener after the SPWTS AIO™.
