

Have it your way – AME Planters with options you demand

Small Frame Modular Design Planters

AME 4, 6, 8 & 12 row planters are modular in design allowing you to configure as 3 point mounted or 2 point hitch pull type along with wide variety of row spacings giving you flexibility on your choice of setup. Selections of liquid or dry fertilizer applicators are available with mechanical or hydraulic drives. All options are modular and can be added at any time. We offer 8 row and 12 row folding toolbars giving you an exceptional narrow transport width as well as support strut bars for added strength and rigidity.

Fertilizer & Drive Options

Large 550 lbs dry fertilizer hoppers or liquid fertilizer tanks up to 500 gal are available and can be driven either by mechanical transmission wheel drive or by hydraulic drive giving you on the go adjustability and control.

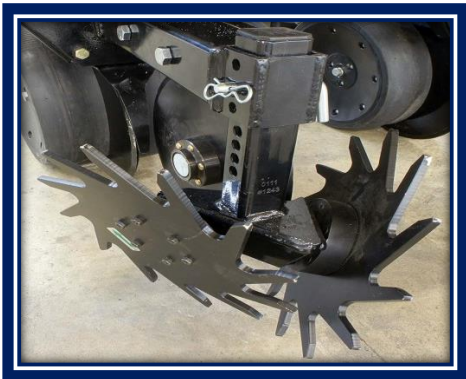

AME Toolbars

AME standard 7"x7" toolbars or new T-Bar® design are capable of handling and able to install strip till units in place of planter row units therefore giving you more versatility and choice. Same is true for side dressing, ridging, bedding or other cultivating applications.

VSR & VFR

Variable Seed Rate (VSR®) and Variable Fertilizer Rate (VFR®) are available on all models and are competitively priced for our smaller planters. This gives you variable seed and fertilizer rates on the go at almost same cost as standard mechanical/singular setup and provides advantages that are only found on large and expensive planters.

OEM Attachments

Wide varieties of OEM row cleaners, no-till coultter blades, fertilizer applicators and other accessories are suitable for our standard 7"x7" toolbars or our new T-Bar® design. Since we follow industry standards, you can mount your attachments to our toolbars or row units.
