

Subsea Tooling Services *Cobra Suction Head*

- Available for STS Predator & Titan dredgers 6" – 12"
- 360 Degree swivel bearing
- Comes with Diver / ROV friendly grab handle
- Made from Stainless Steel
- Stainless Steel bearing assembly
- Push – Fit hose end
- No loss of suction from the sealing ring

The STS Cobra Suction Head has been designed to reduce wear on vital manipulator parts by taking away the torque generated by the suction hose. This gives the ROV or diver much more manoeuvrability of the suction head during dredging operations.

With a 360 degree ring bar handle the cobra head can be picked up in any orientation and operated easily, eliminating excess stress on expensive manipulator parts.

Our stainless steel sealing ring ensures no loss of suction from the dredger during operations and avoids the use of greased components coming into contact with abrasive sands.
