Your World of Risk Matters

We provide accessible resources that empower your team when focusing on your IT risk management needs to quickly identify risk, keep pace with change, and enhance your communications.

Our accessible and usable resources empower your management team to ensure that stakeholders, governing boards, or agency oversight committees have an informed view of risk to your organization or mission in real time.

Organizations or agencies cannot spend resources endlessly performing assessment after assessment in the hope of providing near real-time visibility to risk.

We provide answers to leveraging change management and information assurance monitoring tools and methods. Our value is demonstrated by empowering your organization when determining the criticality of controls and establishing your frequency of assessment.

Your Compliance Assurance Statement in a Climate of Change

“The brain is a wonderful organ. It starts working the moment you get up in the morning and does not stop until you get into the office.” – Robert Frost

We provide insights into the processes that your organization or agency uses to perform measurements and manage an information assurance metric program. (Information assurance measurement empowers your management when making more objective decisions regarding information assurance and effectively identifying noncompliance.)

Our specialists help you to create an effective compliance assurance statement by basing it upon quantifiable information assurance measures taken from your information assurance objectives and policy.

As we build your measurements together – we provide information metrics to benefit your organization or agency with effective ways of gauging operational efficacy of your existing information assurance controls. With this information, your organization or agency may make improved financial decisions about investments in additional information assurance protection or termination of non-productive controls.

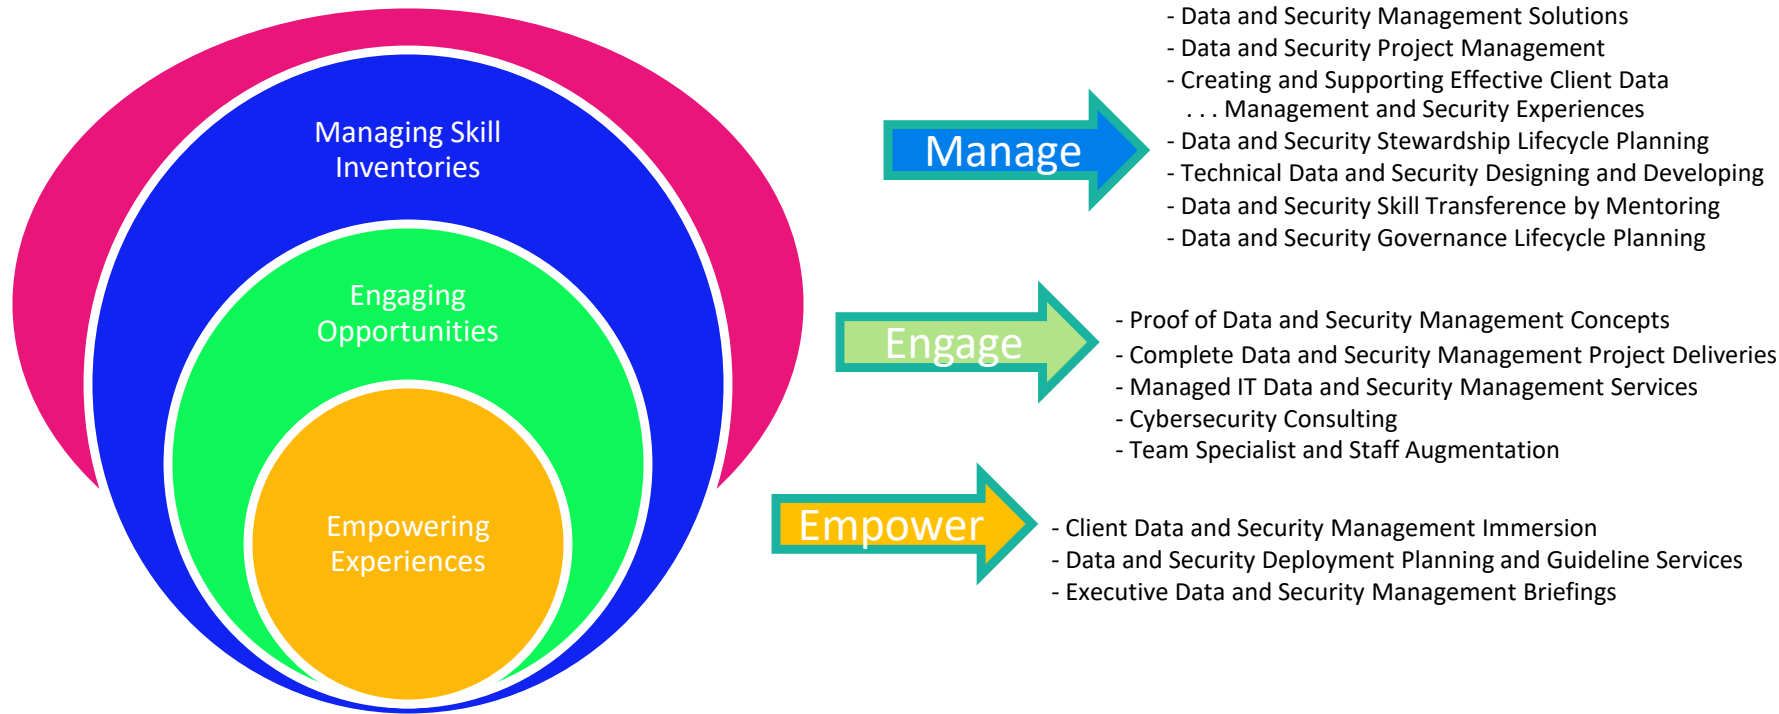

Building Information Security into Effective Data Management

JennisonFYI resources provide data management expertise going beyond development and execution of architectures, policies, practices and procedures. Our team provides flexible information security support for your data throughout the Security Development Lifecycle, System Development Life Cycle, and Database Development Lifecycle activities.

We go beyond crowdsourcing and encryption containment by offering different ways of utilizing people, process, and technology to overcome database, data mart, business intelligence, and data warehouse development needs while building security into your enterprise solutions. Our just in time expertise provides a best first approach to solving your total information security needs while building supportable data management into your enterprise development effort.

In addition, we provide the expertise to engage your information management needs and security issues as they emerge. When security issues arise – we empower your incident handlers with tactical and strategic practices for effectively handling and resolving incidents. In this way, we deliver a data management and security road map comprised of all phases with intersecting security end points for your enterprise data and security management solutions.

SERVICE TRIAGE: A BEST FIRST PRIORITY APPROACH TO SERVICE DELIVERY

Enterprises of all sizes are under increasing competitive pressure to leverage and integrate data, information, and communication technology infrastructure to achieve their vision.

Your planned implementation of secure information technology has a significant positive impact on the socioeconomic development of your organization. Information Technology, as a clear winner, revolutionizes businesses and strengthens governments. As IT is changing your enterprise – we engage with your organization to help manage your data, provide IT security expertise when needed, manage compliance assurance, and add value when managing risk with data.
