

# Refrigerant Gas Compressor Application: 16 USRT Compressor for Air Cooled Chiller

The TurboClaw® refrigerant gas compressors provide multi-stage vapour injection. This results in significant improvements in ESEER and IPLV compared with existing scroll technology, and facilitates a larger operating range with increased compressor capacity. In addition, the inherent part load efficiency performance of the TurboClaw® solution allows for one TurboClaw® compressor to substitute multiple scroll compressors, saving energy, cost, space and weight.
