

Magnetic *Film Fingers*

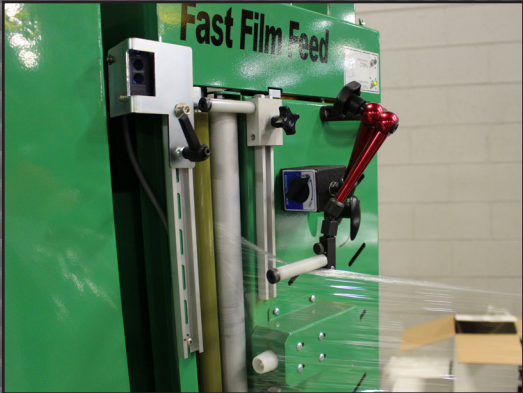

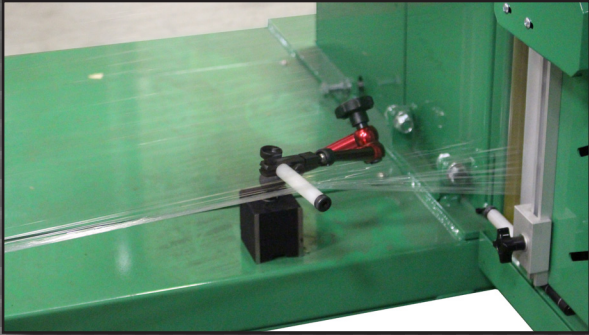

Film Fingers reinforce the top or bottom edges of the film for greater strength, better load containment, and reduce film breaks. The Film Finger folds the edge of the film, creating a durable band that protects the web from breaks and adds extra containment to the load.

Film Fingers are designed with a heavy duty magnetic base that can be mounted to almost any steel surface on any stretch wrapper in the field. The removable magnetic design allows you to position the Film Finger at the top or bottom of the web, or as a roping bar. Multiple Film Fingers can be used to reinforce the top and bottom of the film web, or to attach to the base of the wrapper to lock the film to the pallet.

*Magnetic Film Fingers are not meant to be used for tight film roping, only for folding the edge of the film

HIGHLIGHTS

- » Film Fingers will reinforce the film web to overcome damage and nicks to the film roll that might have otherwise been disposed of
- » Provides extra security and reduces film breaks for loads with sharp corners or large protrusions that might otherwise tear the film
- » Magnetic design allows for installation on any stretch wrapper in the field with steel construction

Bottom Roping

The magnetic base of the Film Finger allows the user to remove the unit and reposition it anywhere on the carriage, as well as on the base of the machine to provide bottom roping capabilities.

Bottom roping allows the bottom of the film web to be reinforced near the pallet only, to better secure the load the the pallet.

Retrofit

Magnetic Film Fingers are available for most stretch wrapping systems in the field. The magnetic base can be adhered to any steel surface, ensuring you can reinforce your film in a variety of ways, on a variety of machines.

Two Sizes Available

The Magnetic Film Fingers are available in two sizes: Standard and Large.

The Standard Film Fingers work best for reinforcement anywhere on the carriage or for bottom roping.

The Large Film Finger will work best in cases where the film output is further away from a suitable mounting location, or for bottom roping where the carriage is further away from the frame of the machine.

STANDARD MODEL SPECIFICATIONS

Max Extension Size	7 Inches
Magnet Strength	Up to 4.5 Pounds
Dimensions	1.13 x 2.13 x 7.75 Inches
Weight	1 Pound
Part Number	700904
PRICE	\$129.00

LARGE MODEL SPECIFICATIONS

Max Extension Size	13.5 Inches
Magnet Strength	Up to 7 Pounds
Dimensions	2 x 2 x 13.75 Inches
Weight	2.5 Pounds
Part Number	700908
PRICE	\$139.00
