

FANTOM SPIRAL

Manual Spiral Stretch Wrapper

The Highlight Fantom Spiral will go anywhere to wrap anything. It is the perfect solution to stretch wrap your loads without stretching your budget.

The Spiral Fantom's unique design allows you to wrap your load within an inch and a half of the ground and up to 65 inches high. Unitize your load with the pallet and be assured your products will stay together all the way to their destination.

The Spiral Fantom is another innovative product from Highlight Industries to help you stretch wrap your product efficiently and economically.

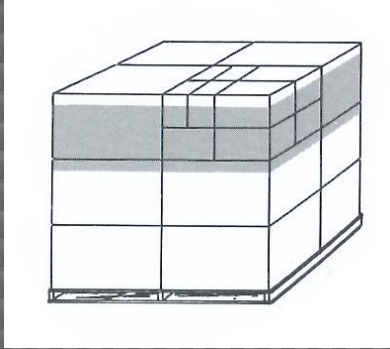

HIGHLIGHTS

- » Stretch Set™ allows you to precisely control the film stretch, optimizing load security
- » The Highlight Fantom Spiral will save time by going to the load and wrapping in place
- » Counterweighted carriage and mobile design relieves the stress and fatigue of handwrapping

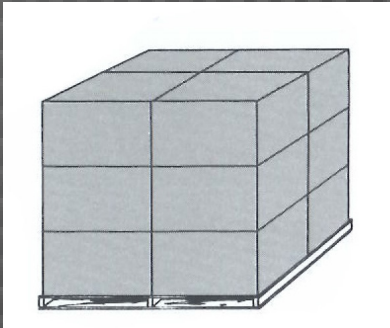

TOP WRAP

Wrap your load with the carriage held at the top of the tower to simply contain your product.

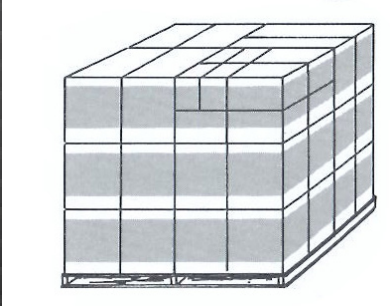

FULL WEB WRAP

Wrap around your pallet while moving the carriage slowly up, overlapping the film, to create a fully wrapped and secure load

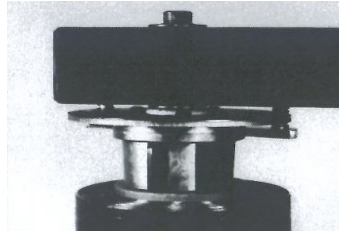

MULTIPLE WRAP

Wrap your load in un-layered stripes to create a breathable and strong wrap.

User Friendly

The Spiral Fantom is outfitted with a self-locking top core that makes loading the film effortless, and locks automatically to prevent the film from slipping and being wasted. It also has comfortable foam grip handles, infinitely variable height adjustment using a counterbalanced system, and four swivel casters that allow for easy operation by virtually anyone.

Stretch Set™

Highlight's patented film tensioning system ensures the film stretch to be precisely controlled. This maximizes your load integrity and film economy.

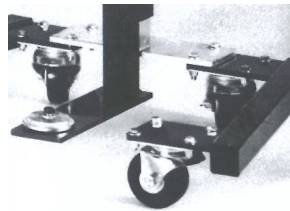

Portable Design

The Fantom Spiral is portable and easily maneuverable and saves time by being able to go straight to the load and quickly wrap it up. It allows you to have a wrapping station at any location in your facility. Any size and any weight load can be wrapped.

Heavy Duty

Strong structural steel base acts as a bumper protecting film and casters. The high strength structural steel tubing design ensures lightweight maneuverability and years of maintenance free operation. The four swivel casters provide equal weight distribution and a strong, well-balanced system.

Load Unitization

The Fantom Spiral has a specially designed carriage that allows the film to get an inch and a half above the ground, which enables you to get a better and more secure load by securing the product

SYSTEM SPECIFICATIONS

Film Delivery	Stretch Set™	Film Carriage	Counterweighted
Film Capacity	Film Core I.D. 3"	Construction	Structural Steel Base and Steel Tubing
Wrap Height	Up to 65"	Casters	Four Heavy Duty Casters Included
