

NEW

POLE

WRAPPER

Saves your WORKERS' Backs

New ergonomic design means crouching and straining to reach the bottoms and tops of loads is a thing of the past, and comes with many benefits: cost savings, worker happiness and faster wrapping.

Your workers will appreciate that they can now easily wrap from top to bottom without straining their backs, arms and legs. You'll appreciate the cost savings and increased productivity.

Saves you GREEN Backs

- Ergonomic design means fewer worker injuries which can result in health bills, down time and slowed productivity.
- Pole design means many loads can be wrapped in half the time or with half the workers, saving wage costs and improving productivity.
- The precision of Highlight's Stretch-Set system means you get the most out of your film; you can use less film and get better results, saving you film costs, freight, and loss of product.
- The inset stretch adjustment knob means you can wrap closer to the floor, anchoring your products to the pallet and keeping your shipments more stable and secure.

the Quality and Value you've come to expect from Highlight

Highlight's Patented *Stretch Set* System:

The entire assembly has been designed for precise operation. Once the core holder is engaged there's 1½ turns of knob adjustment between free roll and maximum stretch. Six quarter-turns give you a full, graduated measure of film stretch, and once the tension is set it will not change until you adjust it. Improved consistency, control and precision mean you can wrap your loads securely and economically.

Heavy Duty Construction:

- Steel top core holder, machined aluminum bottom core holder for strength and light weight
- Heavy Duty aluminum handling pole
- Soil and Abrasion Resistant rubber grips offer easier and more comfortable handling

Attention to Detail:

- Inset adjustment knob means you can wrap to within 1/4" of the floor
- Flat bottom to allow free-standing when not in use
- Four pronged adjustment knob makes judging quarter turns easier and more consistent for dialing in tension
- Two anti-roll pins ensure that the film roll and support system are the only parts that rotate
- DuPont Vespel® ring ensures that the film roll rotates smoothly and consistently
- Designed to make changing rolls easy and intuitive
