Introduction

Technical Turf LTD offers a prestige Sports Turf management and bespoke Lawncare service. We work in construction, design, renovation and maintenance projects with our clients in both the natural and synthetic turf industry.

With over 20 years experience in the Sports Surface construction and renovation industry. We work with any type of sports pitch surfaces including football pitches, cricket grounds, golf courses and bowling greens. Based in Leicestershire in the heart of the East Midlands we can easily travel nationwide using our advanced machinery and expertise to help you get the best out of your lawns or sports surface.

At Technical Turf we are continually investing in advanced machinery and equipment which allows us to offer the most current and professional services in the turf care industry. We provide a wide range of these specialist machines for hire, including the popular Air2G2 which is available nationwide.
Sports Turf Specialists

Technical Turf’s sports turf division specialises in sports pitch renovation and construction, drainage solutions, surface installation, after-care and seasonal or all year round maintenance contracts. Our experience includes working with a range of professional and amateur sports associations and clubs. Technical Turf also provides artificial sports and playground surfaces for Multi-Use-Games-Areas. We will take care of the full design, construction, renovation and maintenance of all your sports projects.

“The Choice for Turf Care”
Lawn & Estate Management

Technical Turf Lawn & Estate division offers a high quality and exclusive service to the lawn care industry in the UK, creating beautiful, outstanding lawns that will be the envy of family, friends or clients, enhancing your enjoyment outdoors.

From grand designs to country cottage gardens, Technical Turf Lawn and Estate division can help transform your lawn. Our treatment programme ensures that we only apply fertilisers, weed control, and moss control in the correct quantities and the right time of year. We then provide a lawn care maintenance programme for our clients to ensure that these results are continued.

The Air2G2

What is the Air2G2?
The Air2G2 is a self-propelled, hydrostatic, drive three probe air injection machine, injecting compressed air to either 7” or 12” deep (depending upon probe fitting). This causes a fracturing effect of the compacted rootzone with no surface disruption. Air is injected vertically and horizontally over an area of 5ft (1.5m) to 12” (30cm) deep.

Where can the Air2G2 machine be used?
The Air2G2 is available to hire nationwide and can be used on all sports surfaces. Technical Turf regularly visit a variety of destinations with the Air2G2 including golf courses, bowling greens, football pitches, tennis courts, cricket pitches and universities.

Benefits of Air2G2
Use on all sports surfaces
Improved growth in the root zone
Better drainage & aeration
Use all year round
No surface disruption
Air injected vertically & horizontally
Area of 1.5m to 30cm deep

Air2G2 Hire
Technical Turf offers a nationwide service to hire. Due to its highly specialist nature the machine is only available to hire with a Technical Turf operator.
