**ACKNOWLEDGMENT**

The researcher extends her heartfelt thanks to everybody who extended his/her hands and prayers in completing this research:

Prof. Zenaida L. Plaza, coordinator of the Graduate Studies, for the facilitation of schedules and encouragements;

Prof. Concepcion G. Belza, her secretary, for taking down notes of the corrections and suggestions during final defense;

Prof. Jeanette G. Tibay- Gongora, her editor, for the assistance extended to polish this manuscript;

Dr. Vivinia B. Daug, her panelist during title defense, who shared her time, effort, and ideas;

Prof. Fabian C. Pontiveros Jr., her panelist during her title defense and also her statistician, for the careful evaluation on the statistical aspects of this research;

Prof. Aida V. Peguit, for accepting the task being the adviser, sharing insights and guidance;

Prof. Rose D. Arquion, her panelist, for the ideas shared;

Dr. Elvira V. Chua, her panelist, for the thorough critiques and shared insights in polishing this study;

Dr. Adelyne M. Costelo-Abrea, Executive Director and the Chair of the panel of oral examiners, for sharing ideas and constructive critiques that gave impact to this study, and for the consideration extended;

Madam Teresita P. Tranquilan, Schools Division Superintendent; Teodoro N. Plaza, P-IV of Agusan Sur National High School; Danilo P. Jore, P-III of Bunawan National High School; Luzviminda M. Pagulong, P-III of Datu Lipus Makapandong National High School; Santiago M. Eliseo, P-I of Lapinigan National High School; and Voit D. Quicos, P-I Libertad National High School, for their approval to conduct this study;

Mr. Danilo P. Jore, the Head of the school where the researcher works, for the consideration and support given during the conduct of this study;

Mrs. Imelda P. Lao, Science Coordinator and Rolly L. Barranco of Agusan Sur National High School; Julieta V. Diango, Science Coordinator of Bunawan National High School; Nida Peniones of Lapinigan National High School; Lolita B. Gonzales of Datu Lipus Makapandong National High School; and Jenalyn V. Plaza of Libertad National High

School, focal persons in the involved schools, for their cooperation shared;

Rodelyn S. Cadao, Geneva D. Talagon, Ana Marie T. Castor, Edelmiro E. Amparo, Florecel S. Empuesto, Julieta V. Diango, Ritchell P. Ombid, Jenny C. Granada, Rhoxanne N. Caralde, Mitchelle Rose A. Sarino, Mar-lie N. Lastimado, Leonita T. Salvaña, Maricel D. Clemeña and Precy Nettie Loberanes, Grade 8 Science teacher-respondents, and Grade 8 students of the involved schools, for their precious time and cooperation;

to her best friends Cha and Hertz, for the constant support, love and care;

to her mother, brother and sister, sisters and brothers in-law, for their prayers and concern;

to her supportive and hands-on Tatay Jake, for the assistance extended in the development of this paper and

above all, to the Lord, for all His showered wisdom, blessings, and guidance all throughout this study.

**DEDICATION**

This work is dedicated to the Lord,  
the source of everything,

to my understanding Tatay Jake,

to my Mama Marilou,

Em-em, Dodong, Eric, Bosel, Bong

to my nephews and nieces, Baby Eli , Lj,

Joan, Glydel, Justine , Taikee, Chucay and others,

to my uncles and aunts, to my friends near and far.

**ABSTRACT**

Title : THE RELATION OF TEACHING STYLES,  
PERCEPTIONS ON SELF- EFFICACY AND LEARNING  
STYLES TOWARDS ACADEMIC PERFORMANCE OF  
STUDENTS IN SCIENCE

Researcher : MARILYN M. EBARDO

Degree : Master of Arts in Education  
with Specialization in Science Education

Oral Examiners :  
Chairperson : Dr. Adelyne M. Costelo-Abrea  
Members : Dr. Elvira V. Chua  
Prof. Rose D. Arquion

Adviser : Prof. Aida V. Peguit

Date : February 12, 2014

Key Concepts : Teaching Styles  
Learning Styles  
Teachers' Self Efficacy

**Problem**

The study dealt with the relation of teaching style, teachers' perception on self-efficacy and learning styles towards academic performance of students in Science.

Specifically, it attempted to answer the following questions:

1. What is the level of teaching style of Grade 8 Science Teachers in the following categories:
  - 1.1 Expert;
  - 1.2 Formal Authority;

- 1.3 Personal Model;
  - 1.4 Facilitator;
  - 1.5 Delegator?
2. What are teachers' perceptions of self-efficacy in teaching Grade 8 Science in terms of the following dimensions:
- 2.1 Personal teacher efficacy;
  - 2.2 Teaching outcome expectancy-belief?
3. What is the level of students' learning style of Grade 8 Science in the following categories:
- 3.1 Independence;
  - 3.2 Dependence;
  - 3.3 Avoidance;
  - 3.4 Collaborativeness;
  - 3.5 Competitiveness;
  - 3.6 Participation?
4. What is the academic performance of students in Grade 8 Science?
5. Is there a significant relationship between teachers' teaching styles and students' academic performance?
6. Is there a significant relationship between perceived levels of self-efficacy in teaching Science and students' academic performance?

7. Is there a significant relationship between students' learning styles and students' academic performance?

## **Findings**

Based on the stated problems, findings on the analysis of data revealed that:

1. Grade 8 Science teachers had *high level* on different teaching modalities (Expert, Formal Authority, Personal Model, Facilitator and Delegator).
2. Teacher's self-efficacy in teaching science indicated *moderate level* in their personal efficacy and *high level* on their outcome expectancy belief.
3. Among the learning styles, grade 8 students had *high level* on *collaborative* and *competitive* learning styles, and generally *moderate level* on *independent*, *avoidant*, *dependent*, and *participant* learning styles.
4. Generally, grade 8 students had an average of 82.119 with the descriptive rating of *Approaching Proficiency (AP)*.
5. There was a *significant relationship (a negative correlation)* between *Personal Model teaching style* and *students' academic performance*. However, there was *no statically significant*

*relationship* on other four teaching styles (expert, formal authority, facilitator, and delegator).

6. There was *no significant relationship* on perceived levels of self-efficacy in teaching Science and students' academic performance.

7. Lastly, there was *statistically significant relationship* between learning styles like *avoidant, collaborative, dependent, participant, and competitive learning styles* towards students' academic performance. Moreover, among the learning styles that showed significant relationships towards students' academic performance, only avoidant indicated negative correlation and the rests with positive correlations. On the other hand, there was *no significant relationship* between *independent learning style* and students' academic performance in Science.

## **Conclusions**

1. Different teaching modalities are dominant among grade 8 Science teachers. Teaching styles generally are not related to the students' performance. The correlation analysis between personal model teaching style and students' performance showed statistically high significant relationship with negative correlation.

2. Teacher's self-efficacy in teaching science indicated no significant relationship to students' academic performance.
3. There was statistically significant relationship between collaborative, dependent, participant, and cooperative learning styles with positive correlations. On the other hand, there was statistically high significant relationship with negative correlation between avoidant learning style and students' performance.

### **Recommendations**

Based on the findings and conclusions, the following recommendations are offered by the researcher.

To the *teachers*:

1. Since analysis between personal model teaching style and students' performance showed negative correlation, it is recommended that all teachers should be cautious enough to limit the use of this teaching style since this approach focused on teacher-centered. Thus, it is highly recommended that learner-centered teaching methods should be implemented, and teachers should put more emphasis on interaction among students and guide their

students by asking divergent questions and develop students to think critically.

2. Moreover, since analysis between avoidant learning style and students' performance showed negative correlation, it is therefore recommended that teachers must have a thorough plan how to deal with avoidant students. Since avoidant learners are not enthusiastic about learning content and attending classes, they should be motivated to reveal their interests in a way that it avoids anxiety and tension towards them. Teacher must prepare enjoyable tasks for the avoidant learners but having the goal towards serious steps in improving this group of learners.

3. In addition, since other learning styles such as collaborative, dependent, competitive, and participant showed positive correlations toward students' academic performance, teachers are recommended to sustain the learner-centered approach in teaching Science and provide activities to develop these groups of students. Inquiry method is also helpful since it encourages students to investigate and construct scientific knowledge by allowing them to test their explanations and compare

them with their existing conceptions. Thus, students should be encouraged also to develop their capacity in order not only to improve their Science performance, but also their learning in general.

4. Moreover, teachers are encouraged to diagnose the individual learning styles of each student then prepare a profile of the class based on the findings of the diagnosis made. Using the profile, teachers should assess current teaching methods and strategies to decide if they are relevant or if it needs to be modified.
5. Lastly, teachers have to make the necessary adjustments so that all students will have many opportunities to meet or exceed their academic goals in all arenas. In order for teachers to meet their learners' expectations, they must be aware of their own teaching styles, levels of self-efficacy and students' learning styles.

To the *Science department heads, school heads and Division Science coordinator:*

1. Since awareness of a teacher's teaching styles, self-efficacy and students' learning styles brings understanding of the elements in students' learning

processes (Nielson, 2007; Rosenfeld & Rosenfeld, 2007); thus, it is recommended that careful monitoring of their learning plans/lesson plans and actual classroom observations must be taken into account. With this, it is critical for teachers to self -reflect and examine their delivery of instruction and their cognitive styles so they can teach in a manner that respects learners' diverse learning styles and different learning situations (Conti & Wellborn, 1989).

2. The *Division Science coordinator* through *school heads and school department heads* must look into the existing teaching styles, self-efficacy and learning styles of students. Student success is and has always been critical in the evaluation of school initiatives; therefore, collaboration between teachers and administrators helps to maintain effective and necessary staff development that promotes a clear vision necessary to increase student achievement.
