

# Company Profile

Talent, passion and professionalism drive us to measure ourselves daily with an increasingly competitive market, in which we distinguish ourselves by the high reliability and quality of our products, easy to install and use.

From when we started, in 1993, DEA System has grown up with ambition, always looking to the future and to develop further: first it took root in its own country and then brought its own Italian challenge abroad, opening branches in and outside Europe.

A challenge that feeds on innovation, continuous research, and constant improvement in performance technology. We study the market needs to satisfy it with flexible and complementary products, suitable to the most varied requirements of installation. Highly reliable technology fully designed, manufactured and tested in Italy. For this DEA System has created DEA Electron, a Business Unit that develops and manufactures high quality electronic with high standards of control and certified results.

We study the market needs to satisfy you with flexible and complementary products often on hybrid and highly reliable installations because they are entirely designed, built and tested in Italy.

The tenacity in achieving the goals has allowed us to scale up not only nationally but also abroad, with the opening of offices in Spain, Poland, France, Portugal, United Kingdom, and summer 2012, Belarus and Russia.

DEA is freedom of movement. We seek the pleasure to satisfy you every day all over the world.

# Residential Products

## Automation for gates, doors and barriers for residential use

SLIDING GATES

**LIVI**  
Residential sliding gate operators

RESIDENTIAL GARAGE DOORS

**LIVI 902**  
Counterweight overhead doors operators

SECTIONAL DOORS, RESIDENTIAL USE

**SPAZIO**  
Sectional and spring garage doors operators

**WILL**  
Balanced roller shutters operator

FOLDING DOORS AND INDUSTRIAL SLIDING GATE OPERATORS

**LATO**  
Industrial doors operators for sectional, folding and sliding doors

SWING GATES

**MAC**  
Electromechanical rams for residential swing gates

**LOOK**  
Telescopic electromechanical rams for residential/collective swing gates

**OLI**  
Hydraulic rams for intensive use swing gates

**GEKO**  
Electromechanical arm operators for residential swing gates

**ANGOLO**  
Electromechanical arm operator for residential swing gates

**GHOST 100**  
Electromechanical underground operators for residential swing gates

BARRIERS

**PASS**  
Electromechanical barriers for residential and semi-intensive use

HOME AUTOMATION

**220H**  
Recessed mini control board and receiver

**TR-PLUS**  
Multi-channel remote control

# Industrial Products

## Automation for gates, doors and barriers for Industrial use

SLIDING GATES

**GULLIVER**

Industrial sliding gate operators

**REV**

Collective sliding gate operators

FOLDING DOORS AND INDUSTRIAL SLIDING GATE OPERATORS

**LATO**

Industrial doors operators for sectional, folding and sliding doors

**LIVI 550PL**

Folding doors operators

SWING GATES

**OLI**

Hydraulic rams for intensive use swing gates

**LIVI 502**

Electromechanical arm operators for collective/industrial swing gates

**GHOST 200**

Electromechanical underground operators for residential/collective swing gates

BARRIERS

**STOP**

Electromechanical barriers for semi-intensive and intensive use

BOLLARDS

**LIFT**

Hydraulic retractable bollards

## Quality and Certifications

DEA SYSTEM SPA obtained the UNI EN ISO 9001 certification in 2005 to:

- Regularly supply customers with products that satisfy their requirements and anticipate their demands so to deliver a product that exceeds their expectations and to offer an added value in comparison with the concurrence;
- Assure a continued improvement to DEA performance, with particular attention to those processes directly influenced from product quality and service;
- Support and motivate all staff in promoting product quality through an internal acknowledgement of internal or external suggestions.

## Service and Technologies

Those who choose excellence can rely on reliable and long-lasting automations and on our fast and resolving pre-and post-sale service.

Technology of high-quality and simple installation, are essential characteristics of the DEA brand products, facilitating professionalism in choice and in the operation, as well as in the relationship with the customer.

We closely follow the production processes, from assembly to the mechanics construction, which, together with our electronics, ensure a constant quality over time.

For this DEA System has created DEA Electron, a company that develops and manufactures high quality electronics with high standards of control and certified results.

We develop intelligent solutions starting with our intuitions, to ensure high performance. Multi-functionality and flexibility of our products stems from a technology available to everyone, close to the real needs of our customers: for this reason we've created a patented system of simplified programming, the DE@ NET. A universal control board that can be installed on all types of automations.

In everyday life that becomes more and more complex, DEA chooses simplification. Quick installation, easy management, command, move freely.

*As you like!*
