Benefits of Security Systems Integration

There are many ways and levels of system integration.
Put simply, it means we can connect certain elements of one system with another.

How does this benefit you?
Easy… it means that you can control parts of one system from another.

Lets say you have automated gates and a button at your desk can open the gate. You're tied to your desk while you wait for a visitor to arrive – so that once you see them on the CCTV Monitor…you can hit that button and open the gate.

Wouldn't it be great if you could float around your premises carrying on with your work in the knowledge that when your visitor arrives, you can manage it from wherever you are?
Your smartphone will beep when they arrive, you can view them on your smartphone, and you can even open the gate – all from the same App!
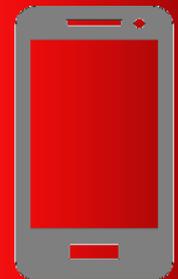

Convenient? Of course it is.

This is the power of integration.

This example showed the benefit of integrating your: Gate + CCTV + Network.

Imagine the possibilities if we integrate other elements, such as…

CCTV Cameras + Doors + Fire Alarm + Gates + Intercoms + Intruder Alarm + Security Barriers + Security Bollards + Turnstiles + Detection beams + Emergency Call Systems + Computer Stations, Tablets & Smartphones,

Security Systems Integration

Your Security Systems may be simple or complex,

but mostly there are just a few features that you need to provide you with the ability to Monitor & Control.

The possibilities are endless, but here are a few examples.

- Use Your Hikvision CCTV App to Open / Close the Gate
- Use your Net2 Access Control system to schedule your Security Barrier to oen at certain times of the day and close at night.
- Use your IT Network to connect Intercom Door-stations around your premises to a central desk or multiple desks.
- Use your Intruder Alarm to send Alarm signal when a fire has been detected.
- Use your CCTV System to alert You or your Monitoring Station when movement has been detected out of hours.
- Use your Intruder Alarm to notify You or your Monitoring Station when there is a Man-Down
- Use your CCTV or Net2 System to turn on lights at the front Yard
- Use your Personal wireless Panic button to trigger a silent alarm if in distress/attacked
- Use your CCTV Cameras to open a Security Barrier upon recognition of authorized vehicle reg.
  These features can be provided by integrating your existing / new systems together as required.

net10

For complete integration, we offer the Paxton Net10 Buildings Management Integration solution.
This will provide you with incredible control of all your systems from one application.
This application can be accessed securely using any PC, Smartphone or Tablet…
 and may be restricted to your Network or accessed from anywhere over the Internet.
