PART OF A SUCCESSFUL DAILY FLOOR MAINTENANCE PROGRAM

A critical part of a successful sustainability program

Features of our Reusable Polar Pads

- High Pile Microfiber for Heavy Soil Load Capacity (*Capture/Remove*)
 - Rinse and Hang Dry
 - Soil is contained in the pad & intake tank
 - Reduces risk of soiled exhaust mist
- A Dustless Floor Pad Which Supports IAQ & Patient Safety
- Rinse to Clean (*Dispose*) & Hang Dry
- Options Available:
 - Round or Rectangular
 - Single Side w/Velcro
 - Multiple Sizes
 - With or Without Scrub Feature
- **FOR DAILY MAINTENANCE**
- **A Truly Dustless Floor Pad** May Support EC.02.05.01 By Being Part of Control Plan that Helps to Increase Time Between Air Filtration Changes
- Can Be Used in CRITICAL CARE AREAS
- Critical Component in Helping to Achieve HCAHPS & HAC Scoring Goals
- Pad Life = 1.5 to 2 years
-  **Sustainable** – reduces carbon footprint by not disposing of used abrasive pads, and avoids pouring soiled floor water into drains
 - Return on Investment – Why buy disposable abrasive floor pads!
 - **Significant reduction in water usage vs conventional floor pads**
- **Reduced Carbon Footprint**

Reusable Microfiber Polar Pad PBG-FP

Reusable Microfiber Polar Scrub Pad FP-(A)

The combination of microfiber plastic & rigid plastic of the Scrub Pad produce cleaning capabilities that are **unmatched by anything on the market today!!!**

Unique features of the Polar Scrub Pad

Eliminates 80% of pad types (colors/sku's) by using a pad that adds a unique scrubbing ability.

- Powerful scrubbing feature
- Can be used to maintain all factory coated flooring types
- Can be used to maintain rubber flooring – textured and non-textured
- Can be used to maintain grouted flooring

Flooring Process Flow

Get To Know The Polar Pad™

Polar Pad™ is a proprietary microfiber pad designed for daily cleaning of most types of floors. The Microfiber Polar Pad™ is two-sided to provide superior cleaning performance on textured floors as well as traditional floor coverings. Polar Pad™ will last up to 5 times longer than traditional pads and can be easily rinsed and reused.

Save Time And Money

Employees using Polar Pad™ clean better and faster with a simplified and streamlined floor care program. Your team delivers a superior result while saving you time and money.

Polar Pad™ Cleans Deeply

Microfiber reaches into the surface of the floor to deliver a clean not achieved by regular pads

- Used for daily cleaning with low-speed machines
- Both sides are microfiber
- Available as round or rectangular to fit all machines
- Scrub strips help to break down embedded soil & bio-film/bioburden
- Quarry Tile, LVT, VCT, Linoleum, Rubber, Ceramic, Stone

The Secrets To Effective Floor Cleaning

- Replace pads before they are worn out
- Set a schedule and stick to it
- Use the right pad for the floor and process
- Use proper chemicals

Did You Know?

- Traditional burnishing pads create dust by removing 2+ layers of finish
- EPA studies show that air pollution is 2-5 times higher indoors than outdoors
- Asthma is the most common chronic childhood illness in the US

Clean

- Microfiber textile designed to remove deeply embedded soil from floor surface
- Performs without harsh abrading or beating surface with stiff bristles
- Improves indoor air quality by reducing soiled mist generated in the auto scrubbing process
- Eliminates "burn" marks and dull spots by adjusting to floor contours

Better

- Simplifies the daily floor cleaning process for staff
- Quiet cleaning reduces disturbance to those around
- Non-abrasive burnishing increases the time between strip and recoat
- Rinse and reuse to outlast traditional pads

Faster

- Superior cleaning performance delivered with one-pass
- Simplifies training for new staff
- One pad for multiple floor surfaces reduces need to switch pads during cleaning

The Patient's BodyGuard products are critical in reducing or eliminating cross contamination risk. Our microfiber based product line mechanically "CAPTURES" and "REMOVES" pathogens from surfaces there by "Breaking the Chain of Infection." By hand Rinsing the Polar Pad, we are "DISPOSING" soil and pathogens down the drain following use.

The results will assist your organization in meeting its HAC and HCAHPS goals while also support TJC field survey requirements listed in IC.02.02.01 – Cleaning and performing low level disinfection AND May Support EC.02.05.01 -By Being Part of Control Plan that Helps to Increase Time Between Air Filtration Changes
