

# Cisco 350X Series Stackable Managed Switches

## Enterprise-Quality Performance on a Small-Business Budget

Large organizations have been using 10-Gigabit Ethernet for years to meet the growing demands of data-intensive business applications. The LAN technology improves network performance and availability while boosting productivity and business efficiencies. It provides a solid foundation for new and emerging technologies - like server virtualization, big data, gigabit wireless, video, and more.

But small and midsized businesses have had a hard time breaking through the cost barrier to adopt this technology. Until now.

Cisco® 350X Series Stackable Managed Switches help you affordably deploy the high-bandwidth applications and technologies essential to competing in today's fast-paced, connected world. This next generation of managed switches is built on 10-Gigabit Ethernet connectivity to give you the highest level of performance. Copper and fiber connection options provide the flexibility to configure your network to handle current applications while also planning for future growth. At the same time, these switches are easy to deploy and manage.

So you can strengthen and simplify your network all at the same time.

## Benefits

- Boost network performance with 10-gigabit speeds
- Simplify your operations
- Enhance your network security
- Conserve power consumption and costs

Cisco 350X Series Stackable Managed Switches

## Break the 10-Gigabit Ethernet Barrier

With Cisco 350X Series Stackable Managed Switches, you can affordably adopt 10 Gigabit Ethernet connectivity. These switches offer 12, 24, or 48 ports of 10 Gigabit Ethernet connections in both cost-effective copper (10GBase-T) and fiber (SFP+) options. You can stack up to four units and up to 192 ports that you can configure, manage, and troubleshoot as a single entity.

## Rich Capabilities Ease Management and Security

Many capabilities are built into the 350X Series switches to simplify the deployment and operation of your network:

- **Easy setup and management.** Configuration wizards and true stacking make it easy to set up and manage the network.
- **Power reduction.** The latest ASIC technology provides power efficiency that reduces your carbon footprint and your energy bill.
- **Security.** Advanced security features include access control lists (ACLs), guest virtual LANs (VLANs), encrypted management data, and IEEE 802.1X security.
- **Threat defense.** DHCP snooping, dynamic ARP Inspection, IPv6 first-hop security, and denial-of-service (DoS) prevention help protect your network.

## Next Steps
