

This is an ORNAMENT

This is a COMMITMENT

Did you know:

* Parakeets, or budgerigars, should live 6-10 years.

* Parakeets need to eat more than just seed. They eat fruits, like apples and oranges, and vegetables, like kale, corn & peas. They will also eat rice, pasta and most other "human" foods.

*Parakeets need veterinary care if they become ill, just like a dog, cat or rabbit.

* Parakeets are *extremely* social animals, and are best in a flock or with at least one friend, but if alone, **MUST** be an integral part of the family.

* Parakeets need to fly every day. They need several hours of "outside the cage time" daily, or a cage big enough for a good flight and wing stretching.

BEFORE YOU GET A PARAKEET, GET THE FACTS!!
