FAIRFAX
DATA SYSTEMS

EASILY MIGRATE DATABASES

## MOVING THE OLD TO THE NEW? WE ARE MIGRATION SPECIALISTS.

Maintaining legacy data is key to upgrading or implementing any business system. If your business systems, either new or old, include IBM FileNet, Fairfax Data Systems is an expert at helping you managing your data.

Fairfax's experienced employees have moved hundreds of millions of documents in and out of FileNet systems and can provide the same high quality service to you. If you are leaving FileNet to go to a new system, Fairfax can extract your images from FileNet for ingestion to your new system or even directly to your new system.

Need to move your old database managed system to your new FileNet application? We can do that too. We will map your existing application to the new FileNet application and import everything quickly and easily.

Don't forget about FileNet to FileNet migrations as you upgrade your legacy FileNet system to the latest and greatest release. Let the experts at Fairfax Data Systems worry about the intricacies of old and new versions as we quickly and efficiently move all of your documents and their meta-data into your new FileNet installation.

Let our experience empower your business!

FileNet Upgrade Specialists

OUTDATED AND UNSUPPORTED?
UPGRADING FILENET HAS NEVER BEEN EASIER.

Are you running an outdated unsupported version of FileNet P8 or one of its components? Did you know FileNet P8 5.0.x went out of support on April 30, 2016? And that 5.1.x is due to go out of support April 30, 2017?

UPGRADING IS INEVITABLE...

Here are some incredible enhancements built into 5.2.x that will make the solution perform better for all users and admins:

- The enhanced user experience makes it easier to create, share, manage, and collaborate on content using mobile, web and desktop.

- Integration with IBM Connections provides user comments and social tagging on managed objects, tracking document downloads, document thumbnails and recycle bin plus many other features.

- The ability to patch or fix without application downtime if you're a 24x7 operation.

- Report generation enabling allows you to build and deliver reports across content applications for IT, business users, and applications.

  Of course, there are many more benefits we can discuss.

Let our sales team talk to you about how a FileNet P8 upgrade will help enhance your business and overall user experience.
