

EFFECTIVELY MAINTAIN COMMON PUBLICATIONS

MANAGE YOUR PUBLICATIONS FOR PEACE OF MIND

Effectively capture a process that allows tracking of new content, modifications of existing content and, most importantly, publishing of content for distribution.

Fairfax Data Systems solution leverages IBM Case Manager along with Quark XML authoring and publishing technologies.

Centralized documents can be authored and edited using common tools such as Microsoft Word, and then passed through the configured work flow to the appropriate next step for review and or publishing.

Once finalized, PDF and HTML versions of the document are published and made available for distribution through our responsive web portal.

TRANSPARENCY, EFFICIENCY AND CONSISTENCY ARE THE KEYS TO MAINTAINING CORE PUBLICATIONS FOR YOUR BUSINESS

Our **Fairfax eReg Solution** helps achieve the following business objectives:

- Increase public transparency and access to documentation related to the regulatory approval process
- Automatically submits applications to internal approval work flows
- Streamline the internal regulatory approval process and increase personnel efficiency
- Establish a platform through which members of the public can easily submit comments and participate in regulatory discussions
- Archive all documentation related to the regulatory approval process and eliminate reliance on hard copy publications
- Standardize the regulatory approval and drafting process
- Publish official regulatory content that complies with electronic legal material requirements
