SmartCon Solutions
Energy Management – Automation – Building Technology

Temperature, Lighting, Voice & Tablet Room Controls

The SmartCon & Premium Products Alliance; bringing together property & performance.

At the foundation of guest facing technology is the optimization of operational efficiency and to compliment the customer experience. SmartCon's collaboration with technology manufacturers provide the hospitality industry with a complete solution to occupancy based room control integrations.

Telkonet EcoInsight Thermostat

The EcoInsight is a programmable controllable thermostat with over 125 configurable settings used to control the efficiency of HVAC systems. The EcoInsight provides unparalleled compatibility across HVAC systems, and is easily installed on package terminal air conditioners, fan coils, heat pumps, split systems, and more.

Telkonet EcoSwitch

Intelligent Lighting Control for Increased Efficiency With the appearance of a traditional light switch and powerful energy management capabilities, the EcoSwitch is an essential addition to a comprehensive building efficiency strategy. The EcoSwitch stops the flow of electricity to lights; conserving electricity that would have been wasted on an unoccupied space. The EcoSwitch is simple; it operates as a standard light switch, yet it has sophisticated energy management and reporting capability.

Telkonet EcoGuard

The EcoGuard, a flexible device to monitor and control power to outlets, helps provide a complete in-room energy management solution. EcoGuard also combats "energy vampires." Energy vampires, or devices on standby power, are products that use power when turned off but are still plugged into a power outlet. On a national basis, standby power accounts for more than 100 billion kilowatt hours of annual U.S. electricity consumption and more than \$10 billion in annual energy costs. The EcoGuard completely disconnects devices from the power supply, preventing lights and other in-room electronics from needlessly consuming energy.

Telkonet EcoCentral

EcoCentral Virtual Engineer offers a wealth of convenient features, including granular EcoSmart device control, cloud-based data backup, and the ability to process raw data into 25 usable, actionable reports.

For more information on pricing, installation, the estimated savings /ROI and additional integrations please call or e-mail info@smartconsolutions.com
