Thank you for your reservation to attend the above workshop. Whether you are attending as part of one of our certification programmes or as a 'stand-alone' workshop we are looking forward to meeting you.

This 3-day workshop is designed for clinicians who have previously completed some training in schema therapy and are looking to further develop skills in using the model. Its aim is to assist clinicians to develop more competence and confidence in the application of Schema Therapy as well as on the application of treatment for **Borderline Personality Disorder** and **Narcissistic Personality Disorder**.

Participants will gain practical experience and guidance in the use of essential experiential techniques such as imagery, chairwork and mode work and other cognitive and behavioural techniques for change. The workshop will include a strong component of supervised practise; it will have approximately 8 hours of dyadic work in a role-play format. This will involve coached practise of experiential exercises (chairwork and imagery) to enhance participants' skills in working with the Vulnerable Child mode, Dysfunctional Coping modes (such as the Detached Protector mode), Dysfunctional Parent modes, and Overcompensatory modes. Video footage and live demonstrations will be used to assist with the learning experience.

Learning outcomes and objectives

Participants will be able to:

- Conceptualise client difficulties involving complex presentations.
- Use mode work to provide limited reparenting to the vulnerable child mode and rescript difficult childhood situations.
- Use mode work to bypass the detached protector mode.
- Use mode work to tackle the Punitive Parent and Demanding Parent modes.
- Use mode work to tackle Overcompensatory modes, such as those seen in the Narcissistic presentation.
- Utilise empathic confrontation with challenging / critical clients.
- Formulate and follow a treatment plan for BPD and NPD clients.
- Understand the Schema Therapy Competency Scale and how it relates to developing therapist core competencies during the treatment process.
- Have a greater awareness of the clinician's own schemas and their influence in treatment, as well as ways to respond to one's own schema activation during the therapeutic encounter.

- Work with clients with self-harming behaviours
- Work effectively with angry and impulsive presentations.

Previous attendees on the training have stressed how important this can be. The recommended readings are:
