INFORMED CONSENT FOR TREATMENT

I understand and agree that health and accident insurance policies are an arrangement between an insurance carrier and me. I clearly understand and agree that all services rendered me are charged directly to me and that I am personally responsible for payment. I also understand that if I suspend or terminate my care and treatment, any fees for professional services rendered me will be immediately due and payable. I will be responsible for any costs of collection, attorney's fees or court costs required to collect my bill.

Chiropractic is a system of health care delivery and therefore, as with any health care delivery system, we cannot promise a cure for any symptom, condition, or disease as a result of treatment in this office. An attempt to provide you with the very best care is our goal and if the results are not mutually acceptable, the doctors will refer you to another provider who we feel can further assist you.

Chiropractic, as well as many other types of health care, is associated with potential risks in the delivery of treatment. Therefore it is necessary to inform the patient of such risks prior to initiating care. While chiropractic treatment is remarkably safe, you need to be informed about the potential risks related to your care to allow you to be fully informed before consenting to treatment.

Specific Risk Possibilities Associated with Chiropractic Care:

Soreness- Chiropractic adjustments and physical therapy procedures are sometimes accompanied by post treatment soreness. This is a normal and acceptable accompanying response to chiropractic care and physical therapy. While it is not generally dangerous, please advise your doctor if you feel experience soreness or discomfort.

Soft Tissue Injury- Occasionally chiropractic treatment may aggravate a previous disc injury, or cause minor joint, ligament, tendon, muscle, or other soft tissue injury.

Rib Injury- Manual adjustments to the thoracic spine, in rare cases, may cause rib injury or fracture. Precautions such as pre-adjustment x-rays are taken for cases considered at risk. Treatment is performed carefully to minimize such risk.

If you have any questions concerning the above statements, please ask your doctor.

Having carefully read the above, I hereby give my informed consent to have chiropractic treatment administered.

CHIROPRACTIC CENTER

Attention Medicare Patients

We do accept assignment from Medicare. We will bill Medicare on your behalf and then you will be billed for the remainder of the charges.

What Medicare **DOES** cover:

Medicare has coverage for manipulation of the spine for acute and chronic conditions that are expected to improve with care. They cover 80% of the cost of this service, once the yearly deductible has been met. You will be responsible for the remaining 20%.

What Medicare **DOES NOT** cover:

Medicare **does not** cover wellness, preventative, or maintenance care visits.
Medicare **does not** cover examinations (initial or reexamination), modalities (ultrasound, electrical stimulation) or therapeutic/rehabilitation exercises.

Depending on your coverage:

- **If you are only covered by Medicare**:

You will be billed for your coinsurance (20%), deductible (if it is has not already been met this year), and remaining charges for examinations and non-covered services.

- **If you have a Supplemental Insurance** (ex. AARP)

Your supplemental insurance will likely cover your coinsurance and deductible. You will be billed for examinations and non-covered services

- **If you have a Medicare Advantage Plan**: (a major medical insurance in lieu of Medicare)

You will be responsible for applicable copayments or coinsurance at the time of service and any remaining non-covered charges after your insurance processes your claim.

The doctors will determine with you what is needed for your specific condition. Examinations are non-negotiable items and must be performed to determine the safety and necessity of care. Modalities and therapeutic exercise are often performed in conjunction with manipulation to accelerate recovery and reduce likelihood future injury. The doctors feel these therapies are important and facilitate recovery/healing, however, they are optional.
