## Divisions and fractions

Divide

$2 \div 2 = \frac{\quad}{\quad} = \dots\dots\dots \frac{6}{8} = \frac{\quad}{\quad}$

$2 \div 4 = \frac{\quad}{\quad} = \dots\dots\dots \frac{5}{10} = \frac{\quad}{\quad}$

$2 \div 8 = \frac{\quad}{\quad} = \dots\dots\dots \frac{3}{9} = \frac{\quad}{\quad}$

$7 \div 4 = \frac{\quad}{\quad} = \dots\dots\dots \frac{10}{100} = \frac{\quad}{\quad}$

Simplify

Take the whole ones out

Make fractions without whole numbers

$\frac{4}{3} = \dots\dots\dots \frac{\quad}{\quad}$

$\frac{7}{3} = \dots\dots\dots \frac{\quad}{\quad}$

$2\frac{3}{2} = \dots\dots\dots \frac{\quad}{\quad}$

$2\frac{11}{10} = \dots\dots\dots \frac{\quad}{\quad}$

$1\frac{2}{3} = \frac{\quad}{\quad}$

$2\frac{1}{4} = \frac{\quad}{\quad}$

$1\frac{3}{10} = \frac{\quad}{\quad}$

$2\frac{2}{3} = \frac{\quad}{\quad}$

2

## Multiply a whole number with a fraction

$3 \times \frac{1}{2} \text{ pizza} = \dots\dots\dots \text{ pizzas}$

$5 \times \frac{1}{2} \text{ pizza} = \dots\dots\dots \text{ pizzas}$

$3 \times \frac{1}{3} \text{ pizza} = \dots\dots\dots \text{ pizzas}$

$4 \times \frac{1}{3} \text{ pizza} = \dots\dots\dots \text{ pizzas}$

$8 \times \frac{1}{4} \text{ pizza} = \dots\dots\dots \text{ pizzas}$

$9 \times \frac{1}{2} \text{ pizza} = \dots\dots\dots \text{ pizzas}$

$2 \times \frac{3}{4} \text{ pizza} = \dots\dots\dots \text{ pizzas}$

$2 \times 1\frac{1}{2} \text{ pizza} = \dots\dots\dots \text{ pizzas}$

$3 \times \frac{1}{4} = \dots\dots\dots$

$5 \times \frac{1}{10} = \dots\dots\dots$

$4 \times \frac{1}{2} = \dots\dots\dots$

$2 \times \frac{1}{5} = \dots\dots\dots$

$2 \times \frac{1}{4} = \dots\dots\dots$

$3 \times \frac{1}{4} = \dots\dots\dots$

$5 \times \frac{1}{4} = \dots\dots\dots$

$8 \times \frac{1}{4} = \dots\dots\dots$

$2 \times \frac{3}{4} = \dots\dots\dots$

$4 \times \frac{2}{5} = \dots\dots\dots$

$5 \times \frac{2}{3} = \dots\dots\dots$

$2 \times 1\frac{1}{4} = \dots\dots\dots$
