Middle Eastern Union

Prepared By: Quantum Corp.

In last weeks Company guidance, A Shared Vision, we began to outline the implications of putting solar panels on the Israel - Palestine border wall. As first mentioned the potential impact of this solution is significant. 708 kilometers or 440 miles of solar panels at only 10ft

in height at .12 cents / kWh, and only on one side of the wall has the ability to generate approximately 50Trillion kWh/ year or \$65Billion dollars worth of energy per year. With the value war in Syria drawing to a close Israel has an opportunity to shift the dialogue of the region toward one of reciprocity and stability. It is expected that Syria will be participating in a unified vision of the Middle East, in line with the Saudi Vision 2030, but will face several obstacles of which will be energy. However, before we can begin to discuss exporting energy from the Israel - Palestine border wall to Syria, we must address Palestine. In some instances Israel has only supplied Palestine with four hours of energy per day. This circumstance is unfortunately not well received by the international community. So how can we fix this problem? How can we change the perception of Israel in the Middle East in such a way that allows it to align with the unified vision? Providing Palestine with energy at a substantially reduced price from the Israel - Palestine border wall could be a useful precondition to opening negotiations with Syria, and the broader region. With U.N. resolution 181(II) 1947 drawing to a successful close Israel is entering a new phase of stability requiring adaptation. This requires a new way of thinking, and with any type of change sometimes taking a bold new

step toward co-creation may feel uncomfortable. \$65Billion dollars of new energy revenues can go a long way to bridge divisions in not only helping Israel maintain energy prices, but create new regional trade agreements offsetting the price of imported goods such as pharmaceuticals. Creating this type of balance could potentially allow Israel to also export its

very well structured heath care system to other Countries in the region. In other words, changing the regional perception of Israel through the solar wall could potentially open trade opportunities with new allies, which could lead to welcoming Israel's health care system with open arms across the region. Sometimes walls built from misunderstanding can be a hidden solution to regional stability. Unlocking the potential of these solutions

requires a diverse evolving regional perspective. The implementation of the potential plan is fairly straight forward. Israel publicly announcing the implementation if the solar wall along with reduced energy prices for Palestine will create the regional conditions necessary for further collective healthcare negotiation. If each Country acts independently of the other regarding imports, in this instance pharmaceuticals, the individual consumer ends up paying higher costs. In the interest of a shared vision for the Middle East, using the solar wall as a precondition, Israel has the opportunity to shape a new dialogue around a Middle

Eastern Union. This Middle Eastern Union would mirror the European Union, but with distinct differences in vision. Moving forward, the narrative of the Middle Eastern Union would provide Israel a continuing sterling opportunity to redirect when needed resolving value regional currency debt disputes, and imbalances as seen with the Iraqi dinar. In this context Israel shifts its role in the region to one of economic leadership founded upon the energy of goodwill. This would allow Israel to significantly change its perception in the Middle East setting forth a framework for the Middle Eastern

Union creating broad regional demand for its health care system. From a humble and modest beginning of implementing the solar wall Israel opens itself up for a more dynamic contribution to a unified vision of the Middle East through the formation of the Middle Eastern Union. This is not a solution that will resolve regional disputes overnight, but rather sets forth a long term strategy for regional assimilation. The Middle Eastern Union will provide a path toward new treaties further shaping the dialogue of regional stability. In this context, future treaties as well as their national identities should be inherent in their fundamental

structures bridging political and constitutional constructs inclusive of regional and local self-government. Middle Eastern Union Member States shall respect each others essential State functions, including ensuring the territorial integrity of the State, maintaining law and order and safeguarding Middle Eastern Union national security. With this type co-creative evolution in dialogue the former strategy of leveraging disputes through traditional value redirection for economic stability becomes marginalized placing mutual regional interests ahead of obsolete Western ideals. In the advent of emerging Technological Singularity Economic Equilibrium it is especially important to shape a path toward the formation of a Middle Eastern Union type construct as the international communities vision on Israel -Palestine disputes becomes increasingly clear. Implementing the solar wall allows Israel to preemptively shift its perception in the Middle East to one of strategic inclusion creating a more dynamic dialogue

around issues that have once been considered to be mired in an indefinite obsolete value impasse. The Company remains committed to the Middle East peace process by supplementing positive dialogue with innovation evolving a co-creative economic backdrop.
