

## RAISED Dream Act

Prepared By: Quantum Corp.

On Tuesday January 9, 2018 the President graciously held a meeting on DACA inviting both Republicans and Democrats. The negotiation covered several key issues of which were, 1. Border security, 2. Chain migration, 3. Ending the visa lottery, and 4. Revising DACA. In the meeting Senator Diane Feinstein more

noticeably used the exact phrase "Clean DACA Bill" indirectly alluding to the Quantum - Trump border walls relevant reapplication to the West bank border wall in Israel. As the Company discusses the meetings four key issues it will become apparent that to achieve the Presidents objectives the Quantum - Trump border becomes a necessity. Lets begin by discussing border security. According to Congressman Cuellar the U.S. spends \$18Billion dollars per year on Southern border security. Key areas of the U.S. - Mexico border wall need to be replaced, and the photo above is a good example of that. Congressman Cuellar also stated that when border patrol agents are asked about how much time the border wall gives them fighting illegal immigration, and drug trafficking, Congressman Cuellar stated a couple of minutes or a few seconds. When examining the obsolete section of border wall above obviously Congressman Cuellar's statements become more relevant. Replacing obsolete border wall fence with the cyclone fencing as Budget Director Mulvaney has outlined becomes a matter of national security. Budget Director Mulvaney specifically stated that the cyclone fence will be used, and improved upon. This is for several reasons, but a majority of the border wall fence is the cyclone design fence, which also happens to be the most effective. The Quantum - Trump border wall best adheres to the criteria specifically outlined by the Presidential Administration. The Quantum- Trump border wall builds upon the cyclone fence utilizing the gaps between the bollards to not only direct energy from the solar wall, but also allow motion detection systems to be integrated.

This multi-pronged solution delivers border patrol agents the technological border security strategy best to win the wars on illegal immigration, and drugs. Moving on, according to Senator Perdue chain migration is fundamentally about economics. As stated in previous Company guidance papers relating to the border wall, on

average citizens of Mexico pay 15%-25% more for energy than U.S. citizens. As the current global economic paradigm continues down the path of technological innovation the barrier to entry for the economy of Mexico to participate remains unnecessarily high. The issue of chain migration in relation to Mexico is best addressed by reducing the underlying economic imbalance of energy. If the economy of Mexico imports energy from the Quantum - Trump border wall, Mexico will not only save \$25-35Billion dollars in its first year, but will create the economic conditions necessary for its citizens to participate in the global economy resolving the issue of chain migration. Whether the cyclone fence of the Quantum - Trump border wall is the full 2,000 miles or 1,750 or 1,250, 950, or 750 miles the solar wall aspect still produces \$291Billion dollars worth of energy at full export capacity at .12cents /kWh, which can be adjusted for capacity. So again, if the economic conditions in Mexico become the same or very similar to the U.S. what incentive does a citizen of Mexico have to migrate? Exactly, not much. The problem of chain migration is one of economics, and opportunity. If the Senate, Congress, and Presidential Administration wish to address the issue of chain migration at its core the Quantum - Trump border wall is the only viable solution that creates reciprocal economic stability. Not only stability between the U.S. and Mexico, but at full capacity the Quantum - Trump border wall will be able to stabilize Guatemala, and

neighboring Countries resolving the issue of chain migration as it relates to energy related economic stability on a much larger scale than initially conceived. Thirdly, ending the visa

lottery in exchange for a merit based Canadian style immigration system was a notable point President Trump made in the meeting. When considering candidates skills such as the ability to speak, read, and write the language, level of education, technological, professional, or trade licenses/certifications., offer of employment in a certified shortage occupation, ability to support self and immediate family members, age, and a record free of criminal convictions or national security concerns are a reasonable set of merit based selection criteria that should be included in the Clean DACA bill - Balanced Dream Act, RAISE Act, or equivalent legislation amending the visa lottery. The Quantum - Trump border wall is a smart wall that will include Intel SGX block chain technology authenticating each kWh produced, and many employees will be needed that meet the new merit based immigration guidelines. Lastly, revising DACA through the RAISED Dream Act in the previous Company guidance was addressed, but expanding upon the last statement as it relates to the entire Twelve Million illegal immigrants is relevant. It is at Attorney General Jeff Sessions discretion as to which illegal immigrants in particular are selected under Kates Law to be reassimilated back into the Country of origin in accordance with the U.S. Constitution. However, the Company, through the Quantum - Trump border wall, has now created the economic balance necessary to provide equal opportunities in Mexico through energy price stability. In the event that a situation occurs, which warrants a second review, the Company will have new merit based reciprocal transition visas (MBRTV) to ease the burden of migratory reassimilation. Company's can apply for merit based reciprocal transition visas to hold, and award them to candidates who display exceptional skills worthy of company placement. No other border wall solution, besides the Quantum - Trump border wall, meets the specific criteria the Presidential Administration requested nor does it meet those four comprehensive strategic objectives in that capacity.
