

## Quantum - Saudi Vision 2030 II.

Prepared By: Quantum Corp.

The implementation of the Saudi Vision 2030 has included many populist reforms which have been met with a positive reception from the people of Saudi Arabia.

The Saudi Vision 2030 has placed the Kingdom on a path to make major

contributions in the current global economic paradigm of technological innovation, and has made progress in advancing women's rights. Amidst the implementation of these reforms pre-existing economic conditions have been unearthed that require a second review for the greater good of the people of Saudi Arabia. On the surface, delegating the appropriate measures to optimize the integration of these antecedent economic conditions back into the Saudi economy is popular. However, if an internal balance cannot be found within the Kingdom the lasting impact on such reforms could be detrimental. Maintaining stability throughout the Kingdom, and aligning the Saudi Vision 2030 to play a major role in the Middle Eastern Union will be paramount. In this context, when those pre-existing economic conditions that have been called into question come forward with viable solutions to help shoulder the economic load for the Kingdom of Saudi Arabia, those voices should be heard. As the Company progresses in its transition working with Prince Khaled bin Talal to reapply solutions like the Quantum - Trump border to solve antecedent economic disputes could be pivotal. The Saudi border wall at roughly 1,600 Kilometers or 1,000 miles has the ability to generate over 121 Trillion kWh of energy per year. This amounts to over \$145 Billion dollars in new revenues per year stabilizing current pre-existing economic conditions. This creates an opportunity for the Kingdom to redirect minor internal concessions with major economic projects

of significance. Prince Khaled bin Talal's reapplication of a solar wall solution creates a positive dialogue around economic initiative working to support milestone projects such as Neom. This solution when paired with minor antecedent concessions could also create a more favorable deal regarding Saudi Aramco's IPO with

respect to Citigroup. In this instance the counterbalancing cyclical synergies created propel the energy sector forward to new heights rendering pre-existing economic consolidation obsolete next to the power of the unified Saudi Vision 2030. The prospect of Neom is exciting, and a unified Saudi Vision 2030 will give investors the clarity needed to take the next step forward. The Company looks forward to working strategically with the Kingdom of Saudi Arabia advancing this dialogue. The international community will be looking for more clarity and dialogue leading up to Saudi Aramco's IPO to gauge the propensity for Kingdom stability when considering taking risk. This shapes a friendly, but competitive counterbalancing narrative that will allow a unified Saudi Vision 2030 to naturally take shape meeting its populist economic reforms more smoothly creating stability South of the Kingdom. Neom has the potential to take shape as the silicon valley of the Middle East, and redirecting any minor internal antecedent grievances with solutions of this scale for the greater good of the Saudi economy should take priority. This will also optimize the implementation of strategies like Air Time for Equity allowing the Riyal to cut across the periphery of the Kingdom creating the types of jobs that will allow Saudi Arabia to compete globally. As these economic conditions begin to take shape rejuvenating the image of the Middle East will become of particular importance as the fair weather value Western diplomacy has corroded clarity on the health of the Saudi economy.

This self aware approach in relation to large scale projects like Neom will allow the Saudi 2030 vision to strategically advance using them as a pretext to negotiation resolving minor regional disputes before they become international concerns. Sovereignty is essential to maintain nationalist passions critical to maintaining order. The United States and the Kingdom of Saudi Arabia understand this very well. However, sometimes amidst these passions simple solutions are often overlooked. As the Company provides the necessary counterbalancing narratives to ensure the success of a unified Saudi Vision 2030 it will give the Kingdom strategic opportunities in perhaps implementing similar solutions as they become relevant. A solar wall solution along the Saudi - Yemen / Saudi - Oman border would not only ~~ZW bai Wba Wfe T W@W\_~~, but will concretely solidify its engineering might. This will allow the Kingdom of Saudi Arabia to reposition economic necessities allowing Yemen and Oman the opportunity to rebuild contributing to the shared vision for the region. In this context, the optics for the Kingdom of Saudi Arabia's Vision 2030 look strong moving forward as long as the pre-existing economic conditions that have been called into question are allowed to come forward with viable solutions, and their voices are heard. This would be a most favorable outcome.

Saudi - Yemen Border Wall

U.S. - Mexico Border Wall

In this instance the Kingdom of Saudi Arabia's populist reforms allow the people of Saudi Arabia's expectation to match the reality through successful projects while at the same time creating the conditions to entrust the redistribution power throughout the Kingdom critical to maintaining balance and order. Quantum Corporation greatly appreciates the Kingdom of Saudi Arabia's consideration.
