# A YEAR ON A BUILDING SITE

 Orpheus

# Introduction

You can follow all the various comings and goings at the building site as the weeks pass. The calendar at the top left-hand corner of each double page is there to tell you what month you've reached.

While the building work goes on, there are all sorts of other things happening. They are not always part of the plan! Quite a few small accidents take place, and a number of animals (and children) make unexpected appearances.

**T**HIS IS THE STORY of how a new building, a school, is constructed over the course of a year. All the illustrations in this book have exactly the same view. But each one shows a different stage in the building work, from when the foundations are dug, to when the walls are plastered and decorated.

Along the bottom of every scene you will see some little pictures, each with a label to tell you what they are. They can all be found somewhere in the busy scene. But where? That's your job to find them! How many can you spot?

A new school is to be built. But before any work can begin, an old building has to be demolished. A crane swings a heavy metal ball at the walls, sending bricks crashing to the ground. A special "claw" scrunches up window frames. Bulldozers and diggers clear everything away.

scrunches up window frames.  
Bulldozers and diggers clear everything away.

building surveyors

Let's find

A few weeks later, the builders make sure the site is ready. Bulldozers clear away the last of the rubble from the old building. The builders cut up old steel girders using special torches. Excavators dig trenches in the ground. This is where the new building's foundations will be. The earth is scooped up and dropped into a dumper truck.

a barrier

a man digging

an architect checking the plans

Let's find

Concrete is pumped from the concrete mixer down into the foundations and the basement floor. Meanwhile, a crane is fixed into position. It will hoist building materials from the ground to the upper floors of the new building. Lorries arrive at the site. They are delivering bricks and steel beams to the site.

Let's find

The frame of the building is complete.  
 Now the builders get to work laying bricks.  
 They are supposed to leave spaces for  
 the windows, but one has been  
 accidentally bricked in!  
 The lorries deliver roof timbers.

The crane lifts these to the top of the building  
 where they are hammered  
 into place.

a bird

a cement mixer

a wheelbarrow

a hook

a man  
throwing  
a bucket  
of water

Let's  
find

The roof timbers are nearly complete. The roofers unroll the felt and nail it to the timbers. Then they fix the tiles on top of the felt. The builders fit window frames into the spaces left in the walls. A small crane winches sheets of glass up to the builders standing on the scaffolding.

Meanwhile, a bulldozer and a digger have returned. A road leading up to the school is going to be built.

bags of cement

broken glass

newspaper

a ladder

a man fitting a window frame

The outside of the building is nearly finished (in this illustration, we've taken away part of the roof and front wall so you can see inside). Now plasterers, electricians and plumbers get to work. Soon — after a few small accidents! — the school has smooth walls, electric wiring and running water. Outside, the new road is under construction. Hot tarmac is tipped off the back of a lorry into a machine that spreads it in a smooth layer.

A roller presses it flat.

two workmen asleep

something burning

Let's find

The school is very nearly complete (once again, in this illustration, we've taken away part of the building so you can see inside). Decorators paint the walls, inside and out. Workmen fit new desks and cupboards. Outside, a man paints a white line down the middle of the new road, while others add a zebra crossing. A television crew rushes to interview the headteacher and find out what he thinks of his brand new school.

It will open in the New Year.
