LEADING ENERGY & WATER
MANAGEMENT SOLUTIONS

Johnson Controls Distributed Energy Storage solutions combine proven battery technology with renowned building automation expertise to reduce energy costs while enhancing onsite power capabilities.

ENER-G Rudox is a packager of standby generator sets utilizing Mitsubishi, John Deere, Volvo and MTU diesel engines plus PSI & Mitsubishi gaseous engines. Delivering custom and standard production generator sets in addition to delivering turn-key, high quality combined heat and power (CHP) systems.

Frigitek[®] Electronically Commutated (EC) Motors and Controllers are well suited for commercial and industrial sectors where walk-in coolers, refrigerators and freezers are used. Dramatic energy savings are achieved by changing out conventional motors with state of the art brushless EC motors and Frigitek[™] Controllers.

IntelliHVAC is a dual microprocessor ideally suited for retrofit solutions in DX systems. Compressor and fan run times are optimized to reduce energy savings up to 30%.

EnerG² easily retrofits over external air probes in refrigerated storage spaces reducing energy between 15-30%. EnerG² measures food and beverage temperatures rather than air.

ElectroCell Systems provides state of the art filtration systems designed to enhance Chiller/Boiler operation by reducing energy and water usage. Chemical treatment is enhanced due to removal of 95% of suspended solids down to 1 micron.
