

# INCOMMSEC

## Working in Education

## Technology Helping Pedagogy:

To date we have provided services to The London Leadership Strategy, a number of primary and secondary schools, colleges and Universities. These services and solutions are varied dependent on the actual needs of the organisation. Which include:

### Internet Connectivity:

Simple to use + fast Internet access = More Apps, quicker downloads, better service.

Our connections can stand-alone from existing services, compliment, or replace.

As App usage increases and greater demands are placed on organisations from users faster, more reliable access to the Internet is required. We provide from DSL to Fibre connections.

“Incommsec demonstrate that they’ve done this time and again and have the benefit of experience in getting this right.” **Andrew Evers**, Group IT Manager, Red Carnation Hotels

### Communications:

- Hosted Exchange and 365
- Hosted Voice and Video Conferencing
- Mobile Device Management (MDM)
- Electronic Document Management (EDM)
- Desktop Management
- Classroom Management

More information overleaf:

### Security:

- Firewalls
- Anti-Virus
- Anti-SPAM
- Unified Threat Management
- e-Bullying Protection
- Radicalisation Protection

Some of the customers we already work with:

# Technology Helping Pedagogy

## Hosted Exchange & 365

Hosted Exchange and 365: Everyone needs email, why spend huge sums of money on building servers, licenses, maintenance, training staff, including email into a Disaster Recovery (DR) and Business Continuity Planning (BCP), when hosting takes care of this for you?

## Hosted Voice & Video Conferencing

Hosted Voice: As with Exchange and email, having the solution hosted means exploiting the cost savings with SIP, or voice over the Internet solutions and not spending lots of money on hardware, software, training, DR and BCP.

## Mobile Device Management (MDM)

Mobile Device Management (MDM): How many tablets, mobiles and laptops do you have in your school, or college? Are they all the same make and model? Do all staff and some students have them or a mixture, do you allow students to use their own devices on the organisation's network? MDM is about managing all the elements of mobile technology within 21st Century education, ensuring technology doesn't get in the way of Pedagogy.

## Electronic Document Management (EDM)

Electronic Document Management (EDM): Paper versus Email and Word docs, Excel sheets, databases. Where is each document saved, who saved it, under which folder and what name, where do we find the information? Can we manage the workflow? Yes, we can manage the workflow and bring back information at a blink of an eye with EDM.

## Desktop Management

Desktop Management: Hours are spent by IT fixing issues that arise from constant use. Wouldn't it be simpler to turn the PC off and on again and start fresh with no issues? That's what we can do with our software. Cutting time and money expenses and increasing hardware life expectancies.

## Classroom Management

Classroom Management: One to many, or one to one, what happens when a number of students study in one room, can the teacher/tutor see what is happening on all machines? Can they work within a virtual classroom? Yes and we can show how simple this is.

## Firewalls, AV and UTM

Firewalls, Anti-Virus, Unified Threat Management (UTM): Protecting the student and faculty bodies from external threats is common practice, which can be performed with simplicity and ease with the range of Education specific solutions we have developed.

## Radicalisation and e-Bullying

Radicalisation and e-Bullying are a constant threat and generally will be initiated from within the protected educational environment. Being aware of who is doing what, where and when is vital. Being able to see where behaviour of individuals is unusual to the norm of themselves or peer group shows the tell tail signs of when something more sinister is happening within your school, college, or university.
