

Questions presented by The Tennis Academy/Aforza
at the Feb 11th, 2021 APRA/SPAR Town Hall:

- Have you considered using a similar occupancy model that you use with retail stores with sports? Essentially you base your allowance on a set number of people within a baseline surface area. We believe this would be an effective model for sports like tennis and others like equestrian and badminton that tend to have natural physical distancing?
- Would you consider categorizing sports into two tiers: contact sports and non-contact sports. This could appeal to the sense of fairness during necessary restrictions with some activities being more of a risk regarding Covid transmissions than non-contact sports.
- The cost of Private lessons can create a financial obstacle for many people (Juniors and Adults) who want to participate in physical activity. Was this considered during the decision-making process? Going forward what is the plan to help adults engage in physical activity- which has been particularly difficult during this cold snap and in icy conditions
- Tennis is a sport with natural physical distancing, and many have acknowledged that tennis is a very low risk activity so how is singles play less safe than Singles lessons? What about singles play for persons within the same household? How is this different from single's lessons?
- For Tennis, please advise the risks in allowing same household members to hit a ball with a racquet 70 feet apart from each other?
