

DOUBLE-ROW BALL BEARINGS
CUSTOMISED BALL BEARINGS

+

As one of the world's leading manufacturers of rolling bearings, linear technology components and steering systems, we can be found on almost every continent – with production facilities, sales offices and technology centres – because our customers appreciate short decision-making channels, prompt deliveries and local service.

The NSK company

NSK commenced operations as the first Japanese manufacturer of rolling bearings back in 1916. Ever since, we have been continuously expanding and improving not only our product portfolio but also our range of services for various industrial sectors. In this context, we develop technologies in the fields of rolling bearings, linear systems, components for the automotive industry and mechatronic systems. Our research and production facilities in Europe, Americas and Asia are linked together in a global technology

network. Here we concentrate not only on the development of new technologies, but also on the continuous optimisation of quality – at every process stage.

Among other things, our research activities include product design, simulation applications using a variety of analytical systems and the development of different steels and lubricants for rolling bearings.

Partnership based on trust – and trust based on quality

Total Quality by NSK: The synergies of our global network of NSK Technology Centres.
Just one example of how we meet our requirements for high quality.

NSK is one of the leading companies with a long tradition in patent applications for machine parts. In our worldwide research centres, we not only concentrate on the development of new technologies, but also on the continual

improvement of quality based on the integrated technology platform of tribology, material technology, analysis and mechatronics.

Tailormade Solutions

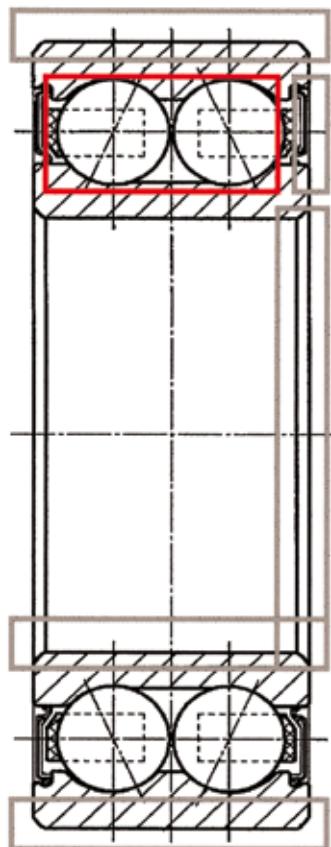

Everything is possible. NSK special bearings are manufactured according to your specific requirements. The only thing "standard" with all our products is the NSK Quality.

Our products are manufactured in Germany to a high standard of quality and reliability, and our management system is certified in accordance with national and international standards. We take responsibility for our total process – when it comes to the environment, too: We take it for granted that raw materials and

energy must be used efficiently and that waste must be reduced to the minimum.

Certification according to
ISO/TS 16949:2002 including
DIN EN ISO 9001:2000 and
DIN EN ISO 14001:2004

Internal design for load ratings:
DIN/ISO 76
DIN/ISO 281

Products and applications

Double Row Ball Bearings

30 mm–180 mm external diameter
(Deep Groove, Angular Contact and Self Aligning Ball Bearings and various versions)

Deep Groove Ball Bearings in:

- › Wheel Bearings
- › Belt Tensioners
- › Fans

Angular Contact Ball Bearings in:

- › The Automobile Industry
- › Shaft Encoders
- › Gearboxes
- › Wood Processing Machines
- › Compressors
- › Mast Guide Rollers
- › Pumps
- › Wheel Bearings
- › Belt-Tensioners
- › Tachometers

Self Aligning Ball Bearings in:

- › Blowers
- › Wood Processing Machines
- › Agricultural Machines
- › Extraction Fans
- › Textile Machines
- › Rollers

Double Row Customised Ball Bearings

for applications such as the in-house design of double row clutch-release bearings based on standard bearing or new designs:

- › Wire-Straightening Machines
- › Electromagnetic clutches (for example)
- › Conveyor Equipment
- › Lifting Equipment
- › Wood Processing Machines
- › Chain Pulleys
- › Pulleys
- › Pulleys for overhead chain conveyors
- › Linear Guides
- › Rope Pulleys
- › All types of Tension Pulleys

Radial Insert Bearing with outer ring

for harvesting machines (special designs, suitable for applications where there is high exposure to contamination and for high-pressure cleaning)

- › Conveyor Belts
- › Housed Bearing Units
- › Chain Conveyors
- › Agriculture Machines
- › Support Rollers
- › Fans

Special bearings on enquiry

- Standard
- on enquiry

Self Aligning Ball Bearings

Self Aligning Ball Bearings are double row bearings with a spherical outer ring raceway. The bearings therefore facilitate angle adjustment and are suitable for compensating for angular misalignment.

Self Aligning Ball Bearings are manufactured with cylindrical and tapered bores. The bearings with tapered bore are predominantly fitted to shafts with adapter sleeves.

The cages of these bearings are normally made of glass-fibre reinforced Polyamide 66. Bearings with these cages are marked with the designation "TNG". The cages of some of the small bearings are made of Polyamide 66 without glass-fibre reinforcement. These are marked with the designation "TN".

A very few bearings (Version J) are mass produced with cages made of pressed steel. The bearings which are normally fitted with plastic cages are also available on request with cages made of pressed steel "J".

Series 22.. and 23.. Self Aligning Bearings are also available sealed on both sides. These bearings are marked with the designation "2RS".

Standards, dimensions

The external dimensions of Self Aligning Ball Bearings are laid down in ISO R15 or DIN 630.

Tolerances

The bearings are only manufactured to the standard tolerance P0.

Bearing clearance

Self Aligning Bearings with cylindrical bores are normally manufactured with standard radial clearance C0 and those with a tapered bore with radial clearance C3. Bearings with other clearances are available on enquiry. The clearances can be found in the table on the next page.

Self Aligning Ball Bearings

Seals

NSK manufactures Series 22.. and 23.. Self Aligning Ball Bearings, not only as an open version but also with seals on both sides of the bearing. These seals are made of nitrile rubber and are reinforced with a steel disc embedded in the rubber. The seals are fixed in the outer ring and seal against the inner ring with a friction sealing lip.

Sealed Self Aligning Ball Bearings are filled with enough grease at the factory to last the normal life span of the bearing. The bearings are therefore maintenance free. Note that sealed Self Aligning Bearings have a lower load-carrying capacity than open bearings of the same type. During installation, it is essential that they are not twisted, as otherwise the seals may be forced out of position.

Angle adjustment facility

Self Aligning Bearings facilitate angle adjustment. The permitted angle of tilt from the central position for Series 12.. and 22.. open bearings is 2.5° and for Series 13.. and 23.. is 3°. With sealed bearings, the permitted angle of tilt is 1.5°.

Dynamic equivalent bearing load

$$P = F_r + Y_1 \cdot F_a \quad [\text{kN}] \text{ for } F_a/F_r \leq e$$

$$P = 0.65 \cdot F_r + Y_2 \cdot F_a \quad [\text{kN}] \text{ for } F_a/F_r > e$$

The factors e , Y_1 and Y_2 can be found in the bearing tables.

Basic rating life

$$L_h = \frac{1,000,000}{n \cdot 60} \cdot \left(\frac{C}{P}\right)^3 \quad (\text{Running hours})$$

$$f_h = f_n \cdot \frac{C}{P} \quad (\text{Factors } f_h \text{ and } f_n, \text{ see tables on p. 40/41})$$

Static equivalent bearing load

$$P_0 = F_r + Y_0 \cdot F_a \quad [\text{kN}]$$

The factor Y_0 can be found in the bearing tables.

Basic static load rating

$$S_0 = \frac{C_0}{P_0}$$

Note: The bore of the inner ring and its 1:15 taper do not comply with DIN 616.

Deep Groove Ball Bearings

Double Row

The structure and operation of Double Row Deep Groove Ball Bearings correspond to that of a pair of Single Row Deep Groove Ball Bearings. They should not be used where compensation for angular misalignment is required.

Standards, dimensions

DIN 625 Double Row Deep Groove Ball Bearings

Tolerances

The tolerances are stipulated in DIN 620. Double Row Deep Groove Ball Bearings are only manufactured to standard tolerance P0.

Bearing clearance

The bearing clearance groups are stipulated in DIN 620 Part 4 or ISO 5753 (see table on next page).

Double Row Deep Groove Ball Bearings are normally supplied with the standard clearance C0 "Normal". Other clearance groups are available on enquiry.

Cages

Double Row Deep Groove Ball Bearings are normally manufactured with snap cages made of glass-fibre reinforced Polyamide 66 and in a few cases, they are also provided with solid brass cages.

M solid cage made of brass,
guided in the outer ring

TNG snap cage made of glass-fibre
reinforced Polyamide 66

Bearings with cages made of glass-fibre reinforced polyamide are suitable for operating temperatures up to +120° C.

Deep Groove Ball Bearings

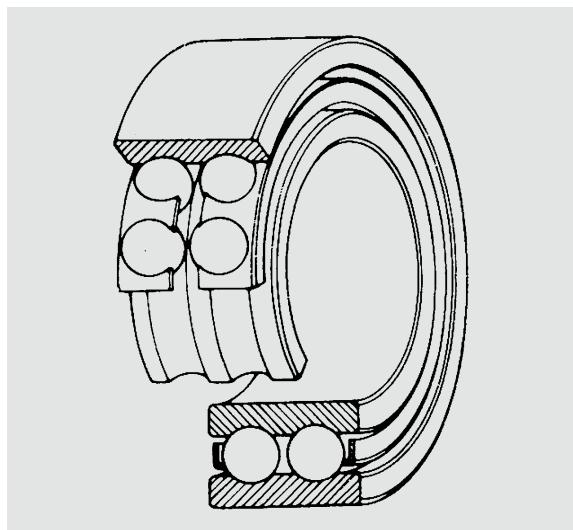

Double Row

Weights

The weights shown in the dimension tables apply to the open version of the Deep Groove Ball Bearings.

Angular adjustment facility

Because of their internal structure, Double Row Deep Groove Ball Bearings do not facilitate angular adjustment. When using these bearings, they must not be out of alignment.

Dynamic equivalent bearing load

$$P = F_r + F_a \quad (\text{Double Row Deep Groove Ball Bearings})$$

With Double Row Deep Groove Ball Bearings, it is essential that $F_a \leq 0.3 \cdot F_r$

Basic rating life

$$L_h = \frac{1,000,000}{n \cdot 60} \cdot \left(\frac{C}{P} \right)^3 \quad (\text{Running hours})$$

$$f_h = f_n \cdot \frac{C}{P} \quad (\text{Factors } f_h \text{ and } f_n, \text{ see tables on p. 40/41})$$

Static equivalent bearing load

$$P_0 = 0.6 \cdot F_r + 0.5 \cdot F_a$$

(Single and Double Row Deep Groove Ball Bearings)

If $P_0 \approx F_r$, then calculation must be with $P_0 = F_r$.

With Double Row Deep Groove Ball Bearings, it is essential that $F_a \leq 0.3 \cdot F_r$.

Basic static load rating

$$S_0 = \frac{C_0}{P_0}$$

Angular Contact Ball Bearings

Double Row

The structure and operation of double row, Angular Contact Ball Bearings correspond to that of a pair of back-to-back mounted Single Row Angular Contact Ball Bearings. They absorb radial and axial forces in both directions. The tilting moments can also be transferred.

NSK supplies Double Row Angular Contact Ball Bearings with two different contact angles. The Series 32..J and 33..J bearings have a contact angle of 32° and are fitted with a cage made of sheet steel. These bearings have filling slots on one side. The bearings must therefore be installed so that most of the axial force is transferred by the side without the slots.

The Series 32.. and 33.. bearings with the suffix "BTNG" have a contact angle of 25° and are provided with a cage made of glass-fibre reinforced Polyamide 66. These bearings do not have filling slots and can therefore transfer axial forces in both directions.

As well as the open version, NSK supplies Double Row Angular Contact Ball Bearings with the suffix "BTNG" also with shield or seals on one or both sides of the bearing. All Series 32..BTNG and 33..BTNG bearings are supplied with grease as standard. The version with the cage made of sheet-steel must be used for operating temperatures above 120°C.

Standards, dimensions

The external dimensions of Double Row Angular Contact Ball Bearings comply with DIN 628.

Tolerances

The bearings are only manufactured to standard tolerance P0.

Angular adjustment facility

Double Row Angular Contact Ball Bearings do not facilitate angular adjustment.

Bearing clearance

The axial clearance of Double Row Angular Contact Ball Bearings is specified. The bearings are mass produced with axial clearance C0 "Normal". Other clearance groups are available on enquiry. The axial clearances can be found in the table on p. 31.

The radial clearance of Version „BTNG“ is approx. 45% of its axial clearance. The radial clearance of Version "J" is approx. 60% of its axial clearance.

Angular Contact Ball Bearings

Double Row

Seals

As well as the open version, NSK manufactures Double Row Angular Contact Ball Bearings with the suffix "BTNG" also with shield or seals on one or both sides of the bearing.

Shields ZR

Shields ZR are sheet-steel discs which are fixed inside the bearing outer ring forming a small gap for the bearing inner ring. The bearings are available with one shield on one side of the bearing "ZR" or shields on both sides of the bearing "ZXR".

Seals RSR

Seals RSR consist of nitrile rubber and are reinforced with a steel disc embedded in the rubber. The seals are fixed in the outer ring and seal against the inner ring with a friction sealing lip. The bearings are available with one seal on one side of the bearing "RSR" or seals on both sides of the bearing "2RSR".

Lubrication

With Double Row Angular Contact Ball Bearings, the gap between the cage and the rings is relatively small. When lubricating with grease, it is therefore not easy for the user to introduce the grease which is required for the initial lubrication. For this reason, NSK also supplies non-sealed Double Row Angular Contact Ball Bearings pre-filled with grease at the factory. The grease which is supplied is a high-quality lithium-based grease with a temperature range of -30° C to $+120^{\circ}\text{ C}$. The grease used by NSK is compatible with all other mineral-oil-based greases.

There is no problem using oil lubrication on bearings which have been lubricated with grease by NSK, providing that the oil used is mineral-oil based. A special version of the bearing is necessary for use with synthetic oils or greases. In these cases, please consult NSK.

Dynamic equivalent bearing load

With Series 32..BTNG and 33..BTNG:

$$P = F_r + 0.92 \cdot F_a \quad [\text{kN}] \text{ where } F_a/F_r \leq 0.68$$

$$P = 0.67 \cdot F_r + 1.41 \cdot F_a \quad [\text{kN}] \text{ where } F_a/F_r > 0.68$$

With Series 32..J and 33..J:

$$P = F_r + 0.73 \cdot F_a \quad [\text{kN}] \text{ where } F_a/F_r \leq 0.86$$

$$P = 0.62 \cdot F_r + 1.17 \cdot F_a \quad [\text{kN}] \text{ where } F_a/F_r > 0.86$$

Basic rating life

$$L_h = \frac{1,000,000}{n \cdot 60} \cdot \left(\frac{C}{P} \right)^3 \text{ (Running hours)}$$

Static equivalent bearing load

$$f_h = f_n \cdot \frac{C}{P} \quad (\text{Factors } f_h \text{ and } f_n, \text{ see tables on p. 40/41})$$

With Series 32..BTNG and 33..BTNG:

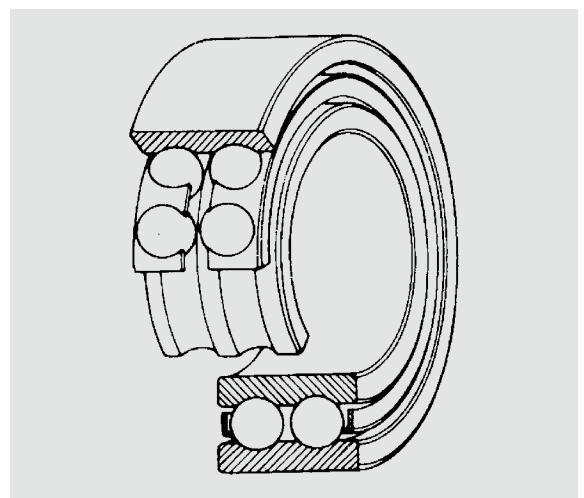

$$P_0 = F_r + 0.76 \cdot F_a \quad [\text{kN}]$$

With Series 32..J and 33..J:

$$P_0 = F_r + 0.63 \cdot F_a \quad [\text{kN}]$$

Basic static load rating

$$S_0 = \frac{C_0}{P_0}$$

Pulleys

Pulleys are developments of Double Row Angular Contact Ball Bearings with a reinforced outer ring. The outer ring can be either of cylindrical or spherical design. The inner ring of these bearings is provided with lubrication holes. The bearings have no filling slot and absorb radial and axial forces in both directions.

The contact angle of these bearings is 25°. The bearing cage is made of glass-fibre reinforced Polyamide 66. Pulleys are supplied with seals or shields on both sides. They are normally supplied filled with grease at the factory. Special pulleys with galvanised bearing inner and outer rings are also available on enquiry.

Tolerances

The bearings are only manufactured to the standard tolerance P0.

Angular adjustment facility

Double Row Pulleys do not facilitate angular adjustment.

Bearing clearance

With Double Row Pulleys, the axial bearing clearance is specified. The bearings are normally supplied with axial clearance C0 "Normal". The axial clearances can be found in the table below. The radial clearances are approx. 45% of the axial clearances.

Cages

Double Row Pulleys are fitted with cages made of glass-fibre reinforced Polyamide 66.

Seals

NSK manufactures pulleys with seals and shields on both sides of the bearing.

Shields ZR

Shields are sheet-steel discs which are fixed inside the bearing outer ring forming a small gap for the bearing inner ring. The bearings are available with shields on both sides "2ZR".

Seals RSR

Seals RSR consist of nitrile rubber and are reinforced with a steel disc embedded in the rubber. The seals are fixed in the outer ring and seal against the inner ring with a friction sealing lip. The bearings are available with seals on both sides of the bearing "2RSR".

Axial clearance of Double Row Pulleys without load

Note: Bearing clearances in µm

Pulleys

Bore 10 – 35 mm

Lubrication

NSK supplies pulleys filled with grease at the factory. This is a high-quality lithium-based grease with an admissible temperature range of -30° C to +110° C. The grease used by NSK is compatible with all other mineral-oil-based greases. The inner rings of the pulleys are provided with a lubrication hole so that bearings can be re-lubricated. With Version 2RSR, the grease must be pressed in slowly to avoid damaging the seals.

Bearing load capacity

If the pulley is supported by a flat contact surface, only a small surface area of the outer ring of the pulleys comes into contact with the rolling plane. The elastic deformation of the outer ring reduces the load-bearing capacity of the pulley. In this case, the values specified in the "Pulley load ratings" table must be used in the calculation.

On the other hand, when installing the pulley in a housing bore, the "Bearing load ratings" apply which are also listed.

Suffixes

LZ	Pulley with cylindrical outer ring (prefix)
LB	Pulley with spherical outer ring (prefix)
B	25° Contact angle
S	Lubrication hole in inner ring
TNG	Cage made of glass-fibre reinforced Polyamide 66
2ZR	Shields on both sides
2RSR	Seals on both sides

Dynamic equivalent bearing load

$$P = F_r + 0.92 \cdot F_a \quad [\text{kN}] \text{ where } F_a/F_r \leq 0.68$$

$$P = 0.67 \cdot F_r + 1.41 \cdot F_a \quad [\text{kN}] \text{ where } F_a/F_r > 0.68$$

Basic rating life

$$L_h = \frac{1000,000}{n \cdot 60} \cdot \left(\frac{C}{P} \right)^3 \quad (\text{Running hours})$$

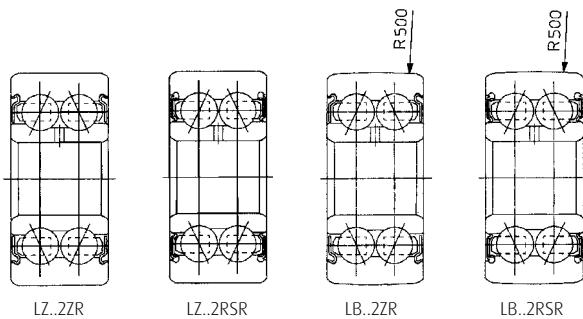

$$f_h = f_n \cdot \frac{C}{P} \quad (\text{Factors } f_h \text{ and } f_n \text{ see tables on p. 40/41})$$

Static equivalent bearing load

$$P_0 = F_r + 0.76 \cdot F_a \quad [\text{kN}]$$

Basic static load rating

$$S_0 = \frac{C_0}{P_0}$$
