Life Singularity, Inc. Joins NVIDIA Inception Program

Basking Ridge, NJ.—February 9, 2018— Life Singularity, Inc. today announced it has joined the [NVIDIA Inception program](), which is designed to nurture startups revolutionizing industries with advancements in AI and data sciences.

Life Singularity, Inc. is a "data network effect" venture in AI/VR-driven health, which aims to develop a virtual AI assistant (a personalized neural network for every individual) by developing a Health Internet of You (genome, biosensors, drones, IoT, smart homes and Environmental Health) and applying deep learning models for individualized precision health (Social, Physical, Cognitive and Financial Wellness / Aging).

The NVIDIA Inception program will allow Life Singularity to get access to NVIDIA technology for deep learning and for analyzing massive datasets in real time, particularly for individualized and "prospective prediction" of IoT events where time, location, and health converge.

Life Singularity is leveraging millions of health and contextual events to scale-up its efforts in development of AI/VR-driven avatars, real-time health predictions, anomaly detection and identification of digital biomarkers delivering hypothesis-free, ensemble-model, prospective health. "*Helping Life Singularity accelerate the delivery of personalized and predictive health at scale for millions of patients is one of the key reasons we chose NVIDIA,*" said Sanjeev Wadhwa, Founder, CEO and President of Life Singularity, Inc.

NVIDIA's Inception program is a virtual accelerator program that helps startups during critical stages of product development, prototyping and deployment. Every Inception member gets a custom set of ongoing benefits, from hardware grants and marketing support to training with deep learning experts.

About Life Singularity

Life Singularity offers a breakthrough predictive health platform delivering personalized, geospatial monitoring with a strong focus on "prospective" virtual care for prevention of health events. The Life Singularity virtual health assistant combines empathy with innovative avatar-based technology, advanced sensing of emotions, behaviors and lifestyles, and Artificial Intelligence (AI) that generates actionable, real-time data and intelligent analytics, enabling clinicians to make better, timelier and "predictive" care decisions, catching the disease ahead of time.
