

EYELASH EXTENSION GLUE – PATCH TEST FORM

The adhesive used for eyelash extensions is a medical grade and is only applied to lashes, not the skin. It is very unlikely that you will experience an allergic reaction, however it is recommended that a small amount of glue is applied to the skin 24 hours before a full set of extensions are carried out.

Please complete the following to confirm that a patch test was carried out, and that no reaction occurred. If there is any sign of redness, itching, swelling or blistering, return to have any traces of adhesive removed and do not proceed with the treatment.

PATCH TEST COMPLETED BY CLIENT DISCLAIMER

I have completed a patch test 24 hours prior to the treatment and noted no reaction to the lash adhesive or the lash remover, therefore I am happy to proceed with the treatment and accept full responsibility for any reaction which might occur.

Treatment: Semi-Permanent Individual Eyelash Extensions

Client signature: Date:.....
