

Non-Destructive Training

Training for ultrasonic testing is taught by our level III. Our students receive 40 hours of classroom training along with hands on of actual welds.

To pass this class must pass a written and practical exam. After completion you will be able to perform ultrasonic testing on welds as well as base metal. You will learn how to evaluate a weld for acceptance per AWS D1.1 and D1.5. You will be taught to perform lamination scan on base metal to determine if the material is acceptable for use
