

Main Idea: **Plants Capture Sunlight To Make Food.**

•Task:

- You will be creating a Team Poster (3 students per group).
- You will use multiple sources to research the photosynthesis process (books, readers, internet).
- Posters **MUST** present evidence that support the above main idea.
- You will use one large poster sheet to include facts and diagrams, which **CLEARLY** support the main idea.
- You will be given one and a half classes to complete this activity. Day 1 will be mostly research, so divide up your sources and use your note-taking sheet to gather information. Decide who will do what research for homework and bring their information to the next class, so posters can be completed.
- Be sure to **read** information then, paraphrase your notes.
- Be as creative as you want with your poster, but remember, it **MUST** be clear and contain **evidence** about our main idea.
- Be ready to share your poster with the whole class.
- Work cooperatively and productively. You may finish your research and collaborate with your team outside of the school day for this poster project.
