

Position Description

Job Title: Senior Environmental Project Manager

Department: Environmental Services Team

Supervisor: Environmental Services Manager

Summary

Serve as a technical advisor and manager for the development and implementation of client environmental programs. These programs include but are not limited to: hazardous and non-hazardous waste management, air and water permitting, environmental site assessment, ISO140001 and other quality management programs.

Essential Duties and Responsibilities include the following. Other duties may be assigned.

Perform environmental site assessments with an emphasis on industrial facilities.

Provide services associated with the management of industrial waste including zero waste to landfill, waste minimization, recycle, and disposal options.

Provide consulting services related to such areas as NPDES, RCRA, SPCC, SWPPP and other items related to client's regulatory compliance.

Evaluate the effectiveness of existing client's internal policies and procedures related to compliance. When issues are identified, effectively communicate the problems to customer management team members, identify alternative solutions, provide recommendations, and ensure issues are resolved.

Review federal, state, and local laws and regulations, including emerging legislation which may affect industrial facilities and thus able to present technical guidance for regulatory compliance programs.

Experience with industrial waste water treatment operations is a plus.

B.S. degree or higher in environmental science or related field is preferred.
