

LongRANGE

Wireless Trap Release

Skeet Counter Setup

Long Range's Skeet Counters have a single 20 foot 4-core cable that powers the counter and releases the High House trap and a single 20 foot 2-core cable that releases the Low House trap. The **RED and BLACK** wires of the 4-core cable are used for power while the **GREEN and WHITE** wires release the High House trap machine. Connect the 2-core cable to the low house trap's release wires. Follow the diagram below to properly setup your counter unit.

Canterbury Voice Release Adapter

With the use of a 4-core adapter, Long Range's line of counter units can be integrated into your existing Canterbury system. As you can see below, the Canterbury Control Box's release wires are connected to the counter using the adapter. The hard wired 4-core cable will provide power to the counter using the provided transformer as well as release the trap using the green and white wires.
