

## Trap Counter Setup

Long Range's Trap Counters have a single 20 foot 4-core cable that powers the counter and releases the trap. The **RED and BLACK** wires are used for power while the **GREEN and WHITE** wires release the trap machine. Follow the diagram below to properly setup your counter unit.

## Canterbury Voice Release Adapter

With the use of a 4-core adapter, Long Range's line of counter units can be integrated into your existing Canterbury system. As you can see below, the Canterbury Control Box's release wires are connected to the counter using the adapter. The hard wired 4-core cable will provide power to the counter using the provided transformer as well as release the trap using the green and white wires.
