Compost

Features: 7/16” screened compost made from food scraps, yard debris, manure, and forest products. Aged well and full of life.

Use: Blended into beds and pots or side or top dressed along established plants. (Compost looks like soil but it is not soil. It is not intended as a sole medium for growing.) 1/4" to 1" layer recommended depending on past application.

Seedling Mix

Features: 7/16” screened compost blended with coir, vermiculite, and organic fertilizer. Lightweight with great water holding capacity and biology. Contains slow-release nutrients for first month of growth.

Use: Pour-and-plant into pots for seed starting.

Potting Mix

Features: 7/16” screened compost blended with peat, coir perlite, sand, and organic fertilizer. Lightweight with great water holding capacity and biology. Contains slow-release nutrients for first month of growth.

Use: Pour-and-plant into pots for seed starting and container gardening.

Composty Mulch

Features: Very bulky, woody material with small bits of compost. High porosity, low bulk density mulch that still provides nutrients and biology. Helps soil surface retain moisture, and prevents compaction from rain.

Use: Top dressing for perennials, such as raspberries, gooseberries, apple trees, & shrubs. Base layer in new bed creation.

House Plant Compost

Features: 1/8” screened compost. Aged well and full of life. 100% compostable packaging.

Use: Scratch some into the soil surface of an established plant or mix it into your soil as you pot up plants. 1/4" to 1/2" layer recommended depending on past application.

Raised Bed Mix

Features: 7/16” screened compost blended with sand and organic fertilizer. Good organic matter, drainage, and biology. Contains slow-release nutrients but should be supplemented with your favorite organic fertilizer throughout the season.

Use: A pour-and-plant option for new gardens or old ones being refurbished.

Measurements

Our bagged products come in several sizes. While other companies use quarts and cubic feet as the measurement, we prefer gallons. (It's easy to picture a 5 gallon bucket!) We offer 2 gallon (8qts), 5 gallon (0.7 cu ft), 7 gallon, and 10 gallon bags. We also have small 2-quart bags of House Plant products.

Bulk products are typically sold by the yard. A “yard” means a cubic yard, as in 3’x3’x3’. One yard is 400 quarts, 27 cubic feet, or 202 gallons. It’s also two level scoops on the JC skid steer bucket. We sell bulk compost, raised bed mix, and composty mulch by the half yard, direct sales only.

How much do you need?

An established bed that's doing well only needs a 1/4"-1/2" layer of compost. Rake it in lightly or top dress for perennials. If it's been a while since you've added compost, you can be more generous, but the real benefit of compost is the biology (microbes!) it adds to your soil. A little goes a long way to build an ecosystem in your garden! A little bit every year is better than lots every few years. If you need help send us the measurements of your beds we can do the calculations for you!

DIY Calculations:

To fill a new bed with growing medium, just multiply the length x width x depth of your bed to get cubic feet. Remember to keep it all in the same unit. (if your bed is only 6" high, use 0.5 feet!) There are 27 cubic feet in 1 yard. Online calculators make it easy!

Buying Bulk

Bulk sales are by the half yard, which is 101 gallons, or one level scoop on the JC skid steer bucket. We can only load into open truck or trailer beds.

Tips:

- Bring a tarp. It will make getting every bit of compost out a snap.
- Half a yard of compost is about 400#. Raised bed mix is about 800#. Your truck bed will max out on weight long before volume.
- If you want bulk but only have a car, we can accommodate you as long as we have prior notice and you are willing to shovel.
