## HOW TO DETERMINE YOUR CLAW SIZES

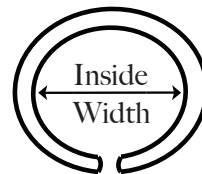

### Width in Millimeters

**Prior to printing, ensure that Page Scaling is set to "100%" on your print dialog box.** (To open the print dialog box, press CTRL + P)

Measure the bar below. It must be exactly 30 millimeters long.

### Measure your finger:

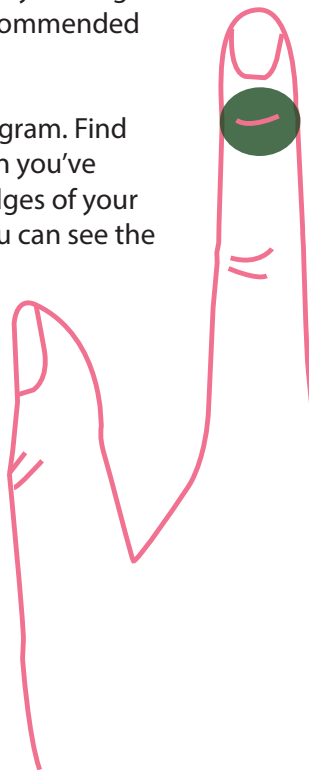

The claw size is the inside width of the claw ring. The measurement is in millimeters.

Your claw ring should fit the width of the position on your finger you'd like to wear it. Just over the first knuckle is recommended for greatest control.

Place your finger over the ovals, as shown in the diagram. Find the one which your finger just covers, in the position you've chosen. No green should be showing around the edges of your finger. (You'll know you have the right size when you can see the green around your finger on the next size up.)

Find the sizes that fit over the part of your fingertips you'd like to wear the claw rings. On your thumbs, however, you need to find the widest point of your knuckle to ensure the claws stay on.

### Finger sizes change depending on time of day and weather, for better results:

1. Measure your finger at the end of the day and when your fingers are warm. (Fingers are smaller in the early morning and when cold.)

2. Measure your finger 3 or 4 times to eliminate an erroneous reading.
