Internet Solutions

Methodology

We understand your needs and requirements. For your benefit or need, we provide our standard process packages, offshore methodology, or key offshore methodology. We discuss with you on recommendation and justification of tools and technology when needed.

We also assure the following:

1. Software support for remote progress monitoring and information exchange
2. Componentization and reuse
3. Complete transparency
4. Long-term support
5. Enhancement ideas, design, development

Our web architects have extensive experience in application servers, web servers, e-commerce products, components, and development tools in the market. Over the years, we have also developed reusable components and architectural frameworks for e-commerce and Internet solutions. As part of our solution offerings, we,

1. Analyze the existing applications, IT infrastructure, and requirements. Suggest application server, web server, standard products and components needed for the total solution.
2. Develop the modules and components needed to fulfill the total solution requirements.
3. Integrate with existing enterprise applications.
4. Adhere to IT infrastructure and suggest modifications where needed.
5. Ensure architecture for scalability, robustness, and security and access control.
6. Use XML/HTML/DHTML, JAVA Applets appropriately for user interaction.
7. Provide multi-lingual support, multiple browser versions, personalization, and consistent user interface.
