August 2014

List of Banned Substances Under Collier County Public Schools Student Athlete Random Drug Testing Program

- Amphetamine / Methamphetamine: Amphetamine: Several street drugs (Ecstasy, MDMA, Speed Black Mollies, etc.) will show a positive for Methamphetamine as Meth is made with Amphetamine. As with many street drugs, buyers may be getting included substances from other categories they are not aware of, and these will be detected. We confirm all findings with GCMS to specifically identify what is in the drug. Test will cover ADHD meds, and there are many, such as Adderall, which is sometimes prescribed, but is being sold illegally and highly abused, also.
- Methamphetamine is going to show positive for just this drug, which some diet pills contain. A positive test will usually show Amphetamine as well. This is why we use an Medical Review Officer MRO, a licensed physician.
- Oxycodone: this one is for this one drug, and is confirmed by GCMS and MRO
- PCP: just for this drug which is making a comeback
- THC: Marijuana, hashish, hemp oil, Dronabinol (Rx form of THC)
- Opiates 3000: Many classes of Opiates form Codeine, Morphine, Heroin, and Hydrocodone. A positive Oxycodone test will also trigger a positive on the Opiate 3000.
- MDMA: Ecstasy, Mollies, Eve; all are strong party drugs that are often loaded with many other things: Amphetamine, Meth, LSD, and Adderall. The main ingredient is MDMA, but this will often trigger a positive Amphetamine test. A street drug made in an illegal lab, no prescription for this anywhere.
- Barbiturates: There are more than 30 brand names of Barbiturates (Butalbital, Phenobarbital, Secobarbital, and Pentobarbital), all can be obtained by prescription, and are detectable.
- Benzodiazepine: Xanax, Valium, Ativan, and many others available by prescription, only.
- Cocaine: testing just for this drug

Anabolic Steroid Testing

A Warning about Supplements: Some students obtain athletic/dietary supplements online and from retail stores. Many of the substances claim to have positive physical effects that have not been substantiated by the FDA. The quality control of some products is questionable and the actual ingredients may not always be fully disclosed to the consumer. It is possible that a student could inadvertently ingest a banned substance. In that case, they would still be liable for any consequences under the Student Code of Conduct.

The following Anabolic Steroids and/or metabolites are included in the steroid screen:

BOLASTERONE	METHENOLONE
BOLDENONE	METHYLTESTOSTERONE
CHLOROTESTASTORONE METABOLITE	NANDROLONE METABOLITE
CLENBUTEROL	NORETHANDROLONE METABOLITE
DROMOSTANOLONE METABOLITE	OXANDROLONE
EPITESTOSTERONE	OXYMESTERONE
ETHYLESTRENOL METABOLITE	OXYMETHOLONE METABOLITE
FLUOXYMESTERONE	PROBENECID (DIURETIC)
MESTANOLONE	STANZOLOL
MESTEROLONE	TESTOSTERONE
METHANDIENONE METABOLITE	TRENBOLONE METABOLITE
METHANDRIOL	TURINABOL METABOLITE
